Motor Movers

Motor Movers team guide

Publishing content, signing schools up, running courses and tracking income.

EARLY PROTOTYPE · NOT THE FINAL PRODUCT

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THIS PROTOTYPE

An early prototype of the proposed platform, not the final product. Schools, people, children and figures are examples. Prepared October 2026.

AT A GLANCE

Motor Movers team: the journey

1 Write content → 2 Wording check → 3 Approve → 4 Sign schools up →
5 Courses and cohorts → 6 Payments and income

Who they are

The Motor Movers team who run the programme and the platform.

What they do

- Writes and approves every session, activity, article, resource and induction part before anyone sees it.
- Signs schools up, sets their licences and stages, and adds trusts and trust leads.
- Sets up courses and cohorts, records invoices and payments, and sees income by school, trust, family and month.

What they can see

Everything across the platform.

What stays out of view

Approve wording that sounds like a diagnosis: the platform blocks it.

> Who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

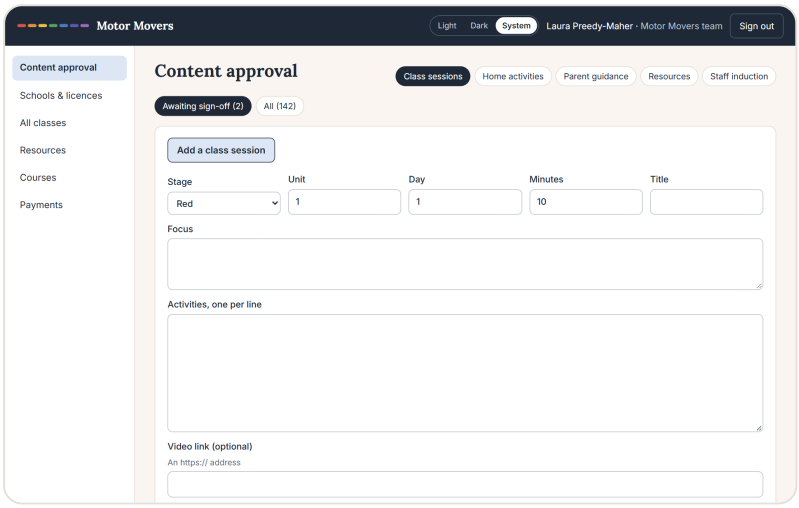

STEP BY STEP

How it works

1 Write new content as a draft

Each kind of content has its own tab: class sessions, home activities, parent guidance, resources and staff induction. “Add” opens a short form; the new item is saved as a draft and waits in “Awaiting sign-off”.

Why it matters: The team can grow the programme themselves, without a developer.

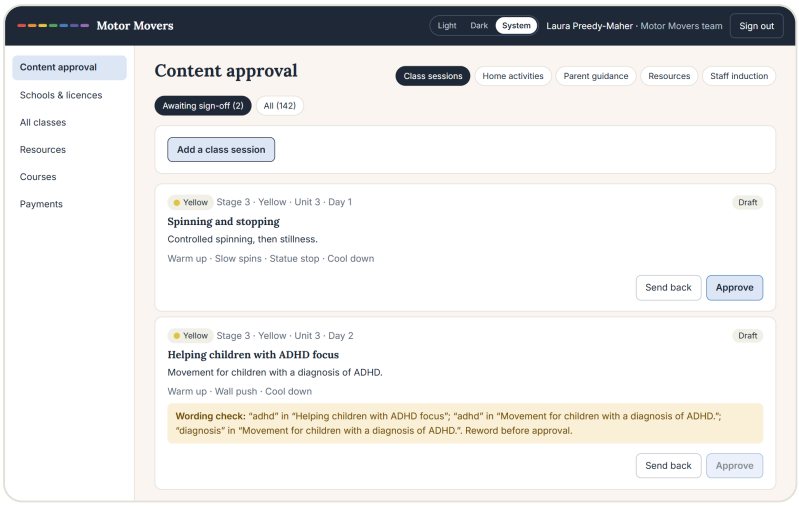

Adding a class session: stage, unit, day, title, focus and activities.

2 Approve it, with a built-in wording check

Nothing reaches teachers or parents until a member of the team approves it. The platform checks the wording first: anything that reads like a diagnosis or a medical label is highlighted, and the Approve button stays locked until it is reworded.

Why it matters: Motor Movers screens readiness to learn; it never diagnoses. The platform enforces that promise on every word.

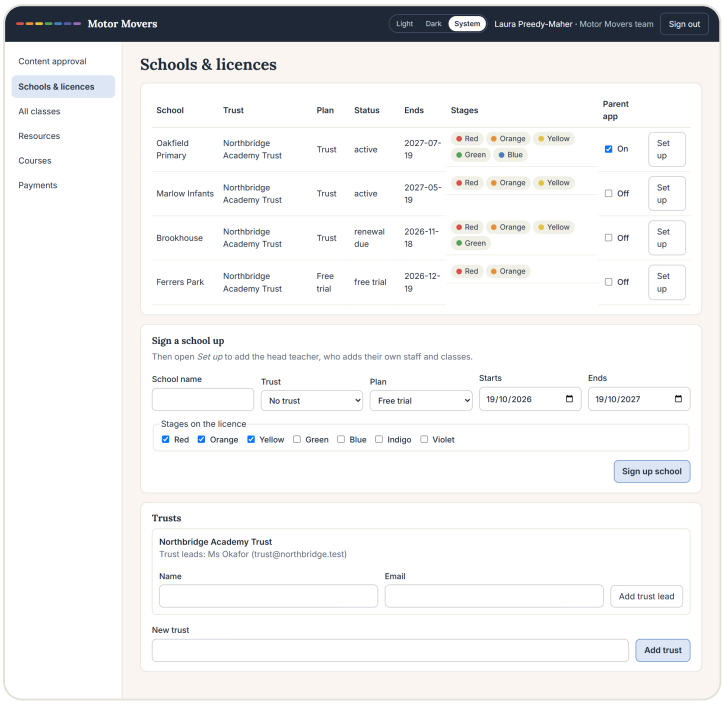

A draft mentioning “ADHD” and “diagnosis” is blocked until it is reworded.

3 Sign schools up and set their licences

Schools & licences lists every school with its trust, plan, licence status, end date and stages, and whether parents can use the app. From here the team signs a new school up, sets the head teacher's account, and adds trusts and trust leads.

Why it matters: Onboarding a school takes minutes, and the licence decides which stages its teachers can use.

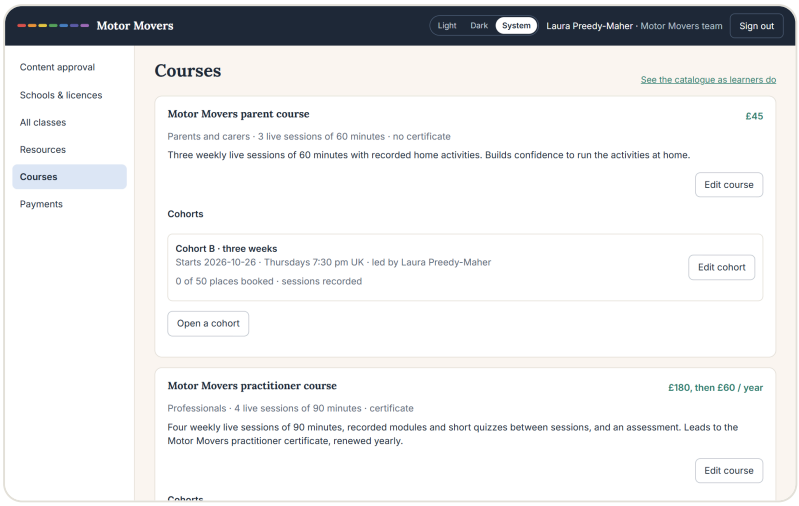

Schools & licences: four schools in one trust, with plans, stages and parent-app switches.

4 Run courses and cohorts

The Courses page lists the practitioner and parent courses. The team edits course details and prices, opens new cohorts with dates, times, trainers and places, and sees how many places are booked.

Why it matters: Training can scale with demand: a new cohort is open for booking as soon as it is saved.

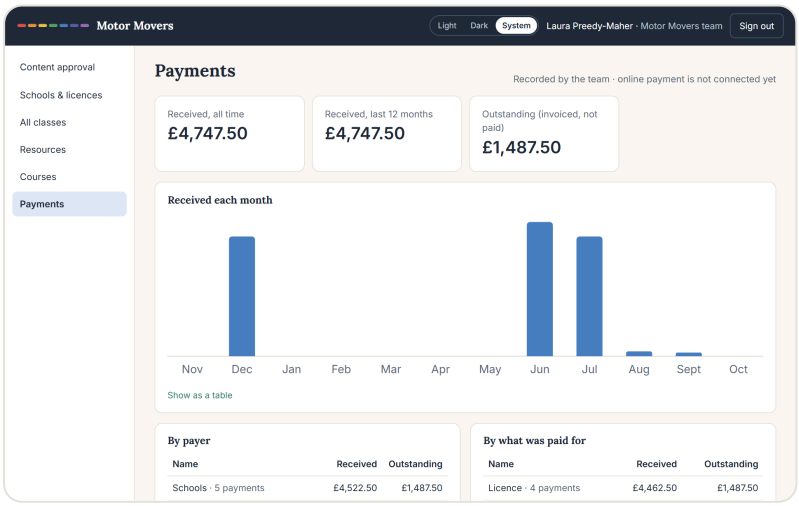

Courses and their cohorts, with places booked.

5 Record payments and see income

The team records each invoice and marks it paid when the money arrives. The Payments page shows money received (all time and the last 12 months), what is outstanding, a month-by-month chart, and totals by payer type, by what was paid for, by trust, by school and by person.

Why it matters: A live view of income and money owed, broken down the way the business needs it.

Payments: £4,747.50 received and £1,487.50 outstanding in the demonstration data.
