Motor Movers

Parent or carer guide

Following a child's progress at home with the parent app, Motor Movers at Home for families without a school, and the parent course.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

Screens show the demonstration version of the platform. Schools, people, children and figures are examples, not real records. Prepared October 2026.

AT A GLANCE

Parent or carer: the journey

1 Code from school → 2 Link child in the app → 3 Today’s activity → 4 Progress → 5 Motor Movers at Home → 6 Parent course → 7 Payments

Who they are

Parents and carers of children in Motor Movers schools, invited by the school; and, with Motor Movers at Home, any family.

What they do

- Links their child in the parent app with a one-time code from the school, and sees how they are getting on, in plain words.
- Does a short home activity or session matched to the child’s stage, most days.
- Without a school on Motor Movers: adds their child, does a short check and follows the daily sessions at home, in the app or on the website.
- Takes the live parent course in Zoom, and pays online by card.

What they can see

Only the children the school has linked to them, or their own family’s children; progress in plain words, not scores.

What stays out of view

Other children, assessment scores, the extra-support flag, or a school child once the school removes the link.

> Who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

STEP BY STEP

How it works

1 Get a code from the school

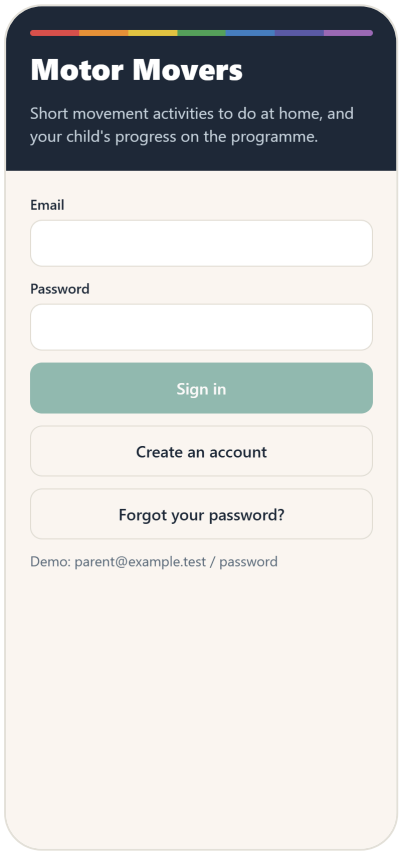

The child's teacher creates a one-time code from the child's profile and gives it to the parent. Each code works once. The school decides whether parent links are switched on, and can remove a link at any time.

Why it matters: Only the right adult sees a child, and the school stays in control.

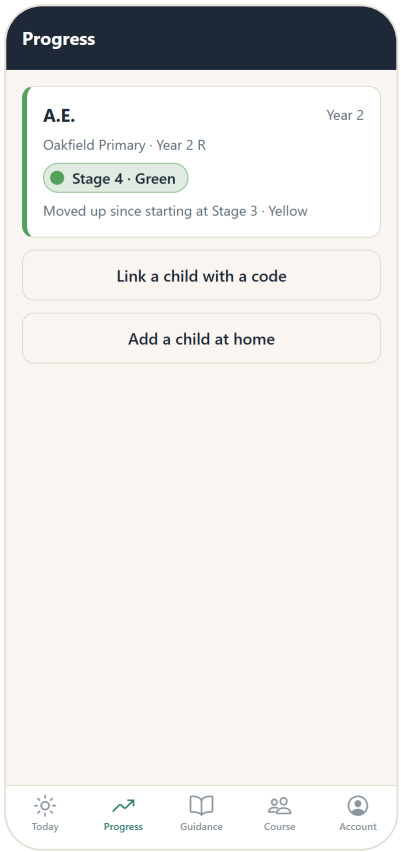

2 Sign in to the parent app and link the child

The parent app is built for iPhone and Android phones; publishing it in the app stores is the next step. Parents create an account or sign in, then enter the code to link their child.

Why it matters: A familiar phone app that a parent stays signed in to for a month at a time.

Signing in to the parent app.

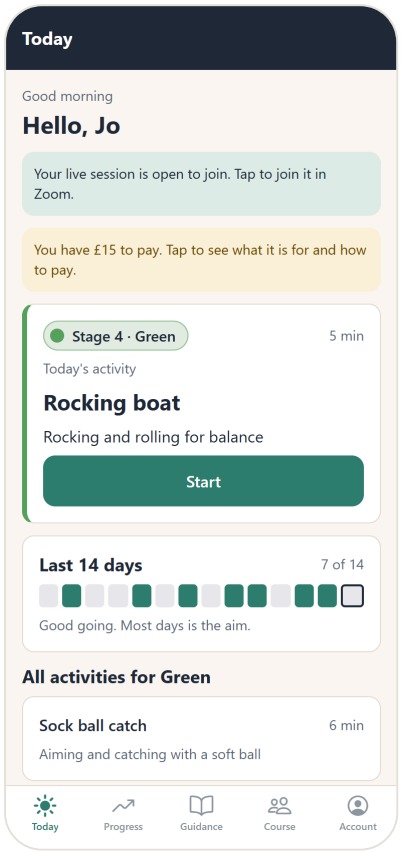

A linked child: their school, class and current stage.

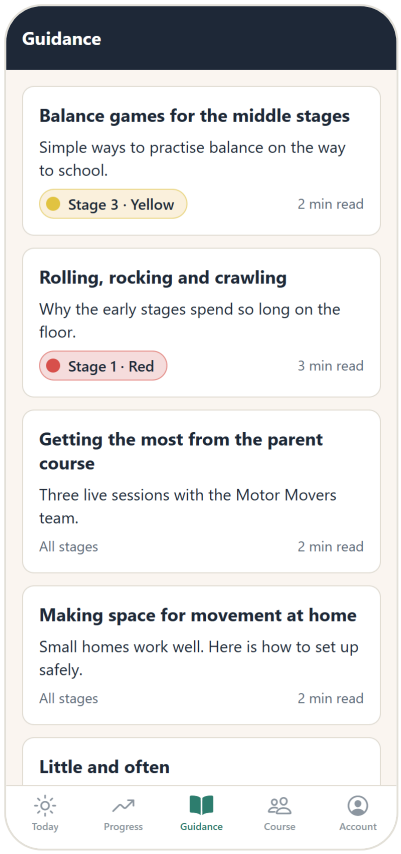

3 Do today’s activity at home

The Today screen suggests a short activity for the child’s stage, usually five or six minutes, with the steps to follow. A 14-day tracker encourages “little and often”, and the full list of activities for the stage is underneath.

Why it matters: Families keep the movement going at home in a few minutes a day, matched to what the child is doing at school.

Today’s activity and the 14-day tracker.

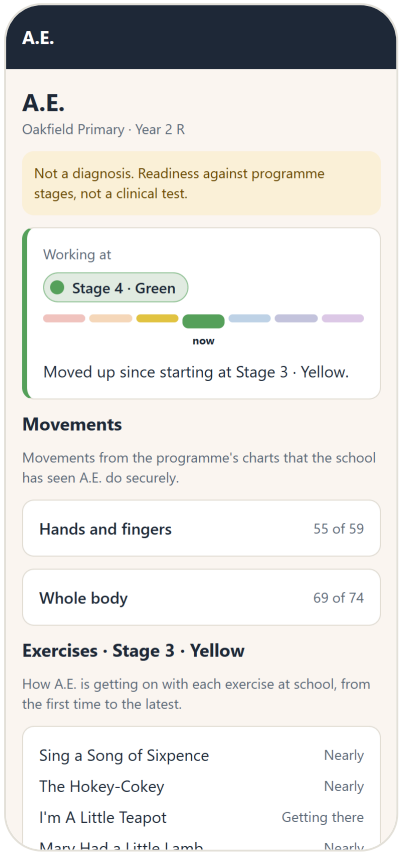

Short guidance articles, each tagged with its stage.

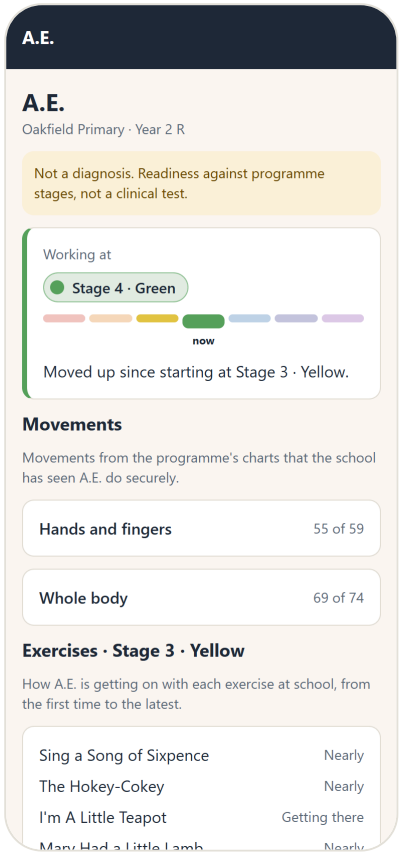

4 See how the child is getting on at school

The child's page shows the school's assessments in plain words: how many movements on the programme's two charts the school has seen the child do securely, and each exercise of the child's colour from the first time to the latest (Not yet, Getting there, Nearly, Got it). Never scores, comparisons or the extra-support flag: the school talks to the family about that.

Why it matters: Parents see real progress, in words that encourage rather than worry, and every view is logged for the school.

A linked child's page.

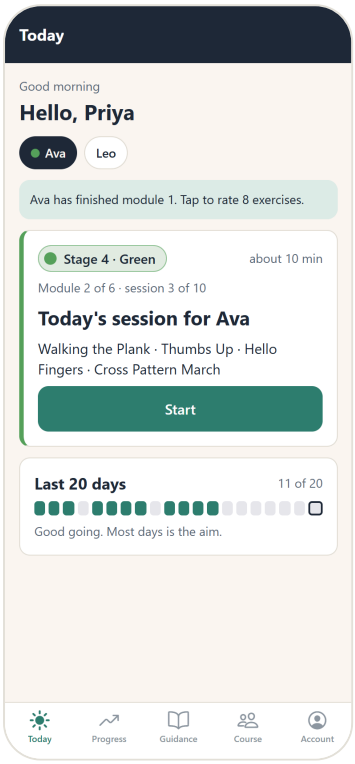

Exercises, from the first time to the latest.

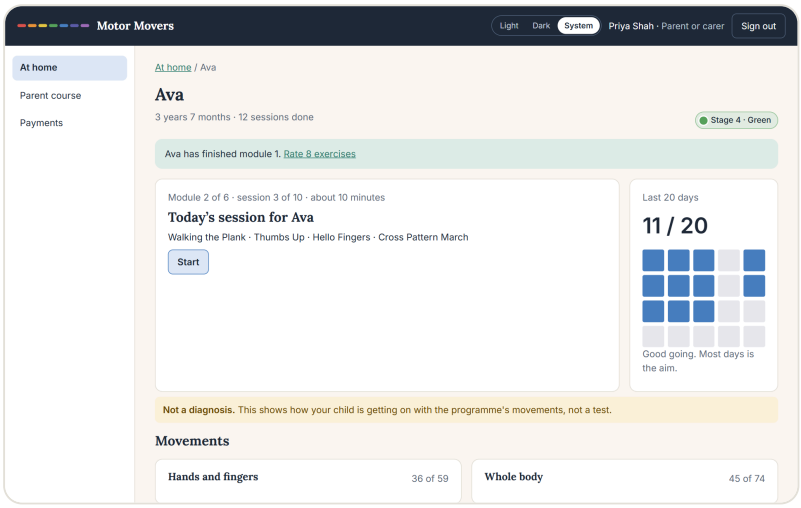

5 Motor Movers at Home: no school needed

Families whose school is not on Motor Movers can still use the programme. They create a parent account in the app or on the website, add their child (a first name or nickname and an age; no date of birth), and do a short check of movements from Pat's charts, which suggests a colour. Each day brings a ten-minute session of Pat's exercises; parents rate each exercise the first time and at the end of each module, in plain words. A second parent or carer can share by code or email, and if the school joins later the record can be shared with the teacher. It is switched on once Pat and the owner agree.

Why it matters: Any family can help their child at home, and the programme reaches children before their school signs up.

Today's session in the app.

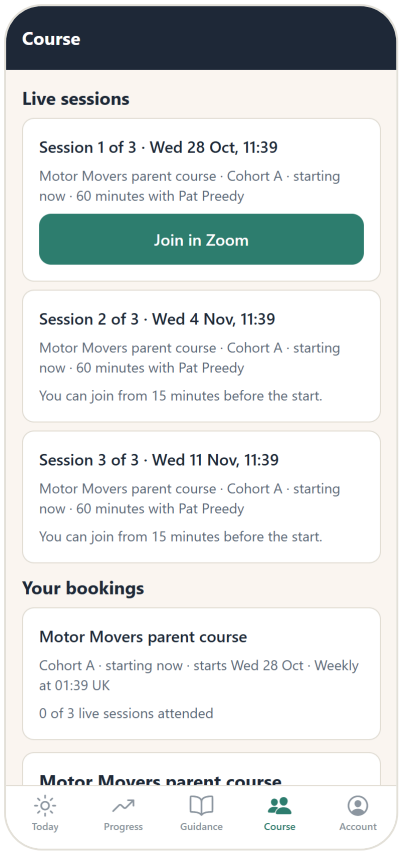

The same child on the website.

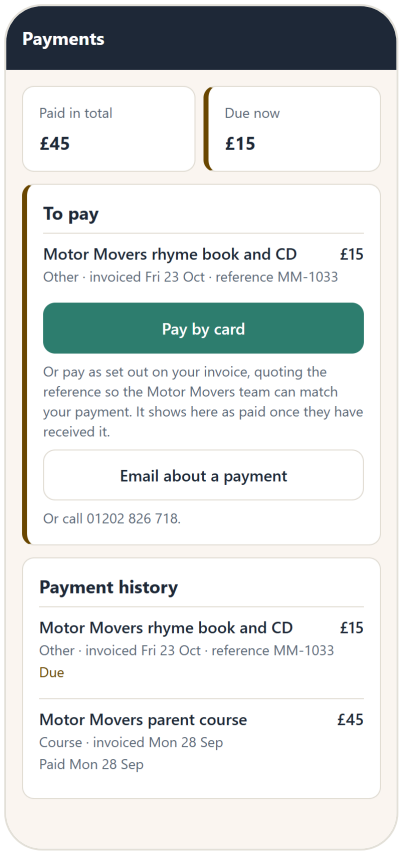

6 Take the parent course

The parent course is three weekly live sessions of 60 minutes, priced per family. Parents book in the app or on the website. When a session opens, the phone shows a notification and “Join in Zoom” opens the meeting in the Zoom app.

Why it matters: Confidence and know-how for parents, from the Motor Movers team directly, in a few taps.

Live sessions in the app, with Join in Zoom.

Payments, with Pay by card.
