Motor Movers

PROTOTYPE

Platform guides

How each person uses the Motor Movers platform, step by step, with the screens they see.

WHO THIS IS FOR

Investors, partners and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

A prototype in design, shown with demonstration data. Schools, people, children and figures are examples, and features and wording may change. Prepared November 2026.

THE PROGRAMME

What Motor Movers is

Motor Movers is a movement programme for primary schools and early-years settings. Many children start school without the movement skills that learning relies on, such as balance, coordination and control of their hands. Motor Movers gives them a few minutes of the right movement every school day, based on the Movement for Learning research.

The programme runs in seven colour stages. Each class works through the stage that suits it, and schools can license all seven or only the ones their children need.

1 · Red | 2 · Orange | 3 · Yellow | 4 · Green | 5 · Blue | 6 · Indigo | 7 · Violet

The platform is the single place where the programme happens: teachers run sessions and assess children, leaders see progress, families continue at home, practitioners train, and the Motor Movers team runs the whole service.

HOW IT FITS TOGETHER

One platform, seven kinds of user

1 · THE MOTOR MOVERS TEAM
publishes approved sessions and activities, and licenses each school for its stages.

2 · TEACHERS
run a guided 10-minute session daily, with ongoing assessment and start and end developmental assessments.

3 · HEAD TEACHERS
see participation and progress for every class, approve staff training and act where support is needed.

4 · TRUSTS AND SCHOOL GROUPS
see summaries across their schools to plan renewals and budgets.

5 · FAMILIES
link their child with a school code and keep the movement going at home; families without a school can use Motor Movers at Home.

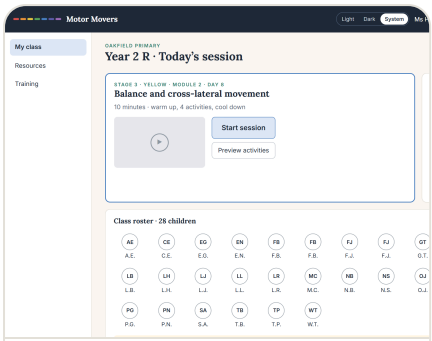

6 · PRACTITIONERS
take the live course, its quizzes and the certificate, growing the number of trained adults.

7 · TRAINERS
run the live sessions on Zoom inside the platform, so training grows beyond one person.

Each of these people has a step-by-step guide in this pack, with the screens they see.

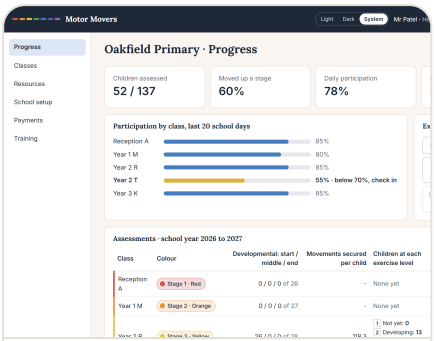

WHO USES IT

What each person sees

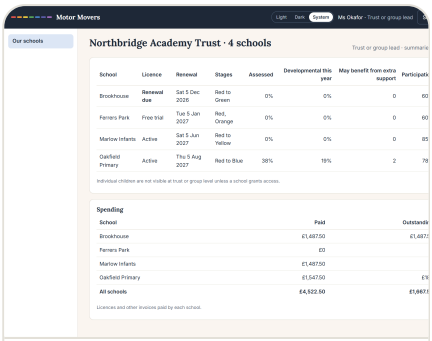

Class teacher

Runs the 10-minute session every school day, assesses children with Pat Preedy's two assessments and sees each child's profile.

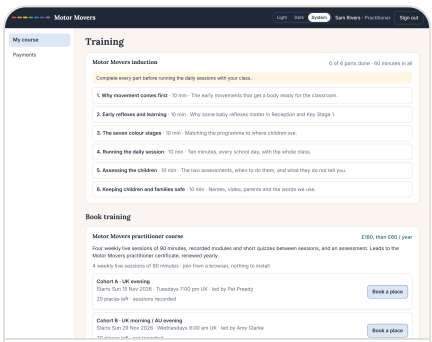

Head teacher and SENCo

Sees both assessments, progress and participation across the school, sets the school up and checks payments.

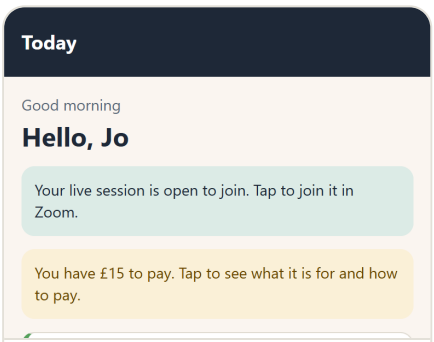

Trust or group lead

Compares licences, results and spending across a group of schools, without seeing individual children.

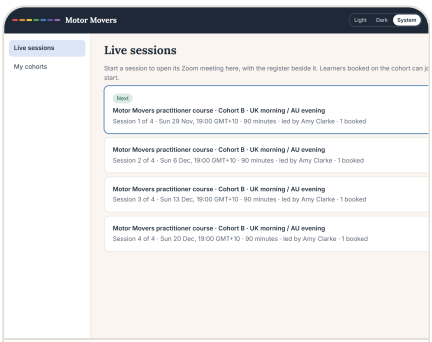

Practitioner

Books the live practitioner course and works towards the yearly-renewed certificate.

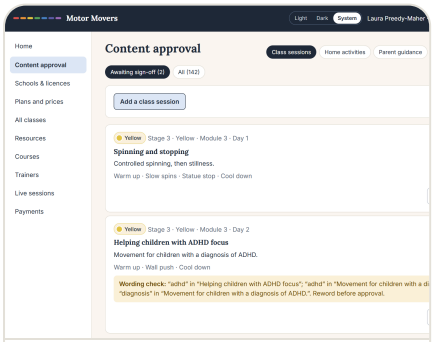

Parent or carer

Follows their child's progress in the parent app, does short sessions at home (with or without a school) and takes the parent course.

Trainer

Runs the live course sessions given to them on Zoom, keeps the register and completes their cohorts.

Motor Movers team

Publishes approved content, signs schools up, runs courses and trainers, and tracks income.

TRUST AND SAFETY

Designed to protect children

Schools trust Motor Movers with records about young children. These protections are part of the design of the platform, not left to good intentions:

- **Never a diagnosis.** The platform assesses progress with the programme. Every profile says it is not a diagnosis, the extra-support flag never names a cause, and the team cannot approve wording that sounds like one.
- **Initials by default.** Children are shown by initials unless the school chooses to show full names.
- **Everyone sees only their part.** Teachers see their own class, heads their school, trusts and school groups summaries only, parents only the children linked to them.
- **Parents are invited by the school.** A one-time code links a parent to a child, and the school can remove the link at any time. Parents see progress in plain words, never scores.
- **A family's own children stay with the family.** With Motor Movers at Home, only the family sees its children, with no date of birth, unless it chooses to link the school.
- **Every view is logged.** Each time someone opens a child's record it is written to an access log the head can review.
- **Records do not linger.** Children who leave are deleted automatically a year after their leaving date.
- **Video is off by default.** Assessment video needs the school to opt in and parents to consent.
- **Data stays in the region.** Each deployment serves one data region, so UK schools' data is hosted in the UK.
- **Secure accounts.** Staff are invited by email, passwords are at least 10 characters, repeated sign-in attempts are slowed down, and switched-off accounts stop working within a minute.
- **Safe live training.** Adults only on camera, and no discussion of an individual child's condition.
- **Card details never touch the platform.** Card payments are taken on the payment provider's own secure page.

THE BUSINESS

How the platform is designed to earn

The design has two sources of income, both managed in the platform: yearly school licences and live training courses. Schools, families and practitioners could pay by card online, and staff course places would be invoiced to the school once the head approves them. The team would see income by month, school, trust or group, family and type.

Source	Who pays	What it is
Early years plan	Early-years setting	Yearly programme licence
Primary plans	Primary school	Yearly programme licence, for some stages or all seven
Trust plan	Each school in a trust or group	Yearly licence at trust pricing
Practitioner course	Practitioner or employer	Live sessions, assessment and a certificate renewed each year
Parent course	Family	Live sessions and home activities

Prices are still to be confirmed. Any figures on the screens in this pack are examples only. A free trial would let a school start before it buys.

WHERE IT STANDS

Status in November 2026

The platform is a prototype. Everything in this pack is considered in the design and can be tried with demonstration data, so it can be shaped with Pat before anything is final.

Considered in the design

- A public website, and the platform for all seven kinds of user.
- A parent phone app for iPhone and Android, with phone notifications.
- Live course sessions on Zoom inside the platform, with a training team, registers, quizzes and certificates.
- Content approval with a wording check, school onboarding, staff training approved by heads, and payment by card.
- Pat Preedy's two assessments for all seven colours: the developmental charts and the exercise scores, with profiles, the head's overview and an extra-support flag.
- Motor Movers at Home for families whose school does not use the programme, in the app and on the website.

Still to settle

- Pat's revised descriptions for Motor Spin, Jack and Jill and Twinkle Twinkle, and a few queries on the grids.
- The induction for families on Motor Movers at Home, and where Red fits for the youngest children.
- The filmed session videos and rhyme recordings.
- Prices, and a privacy notice for families.

The guides in this pack

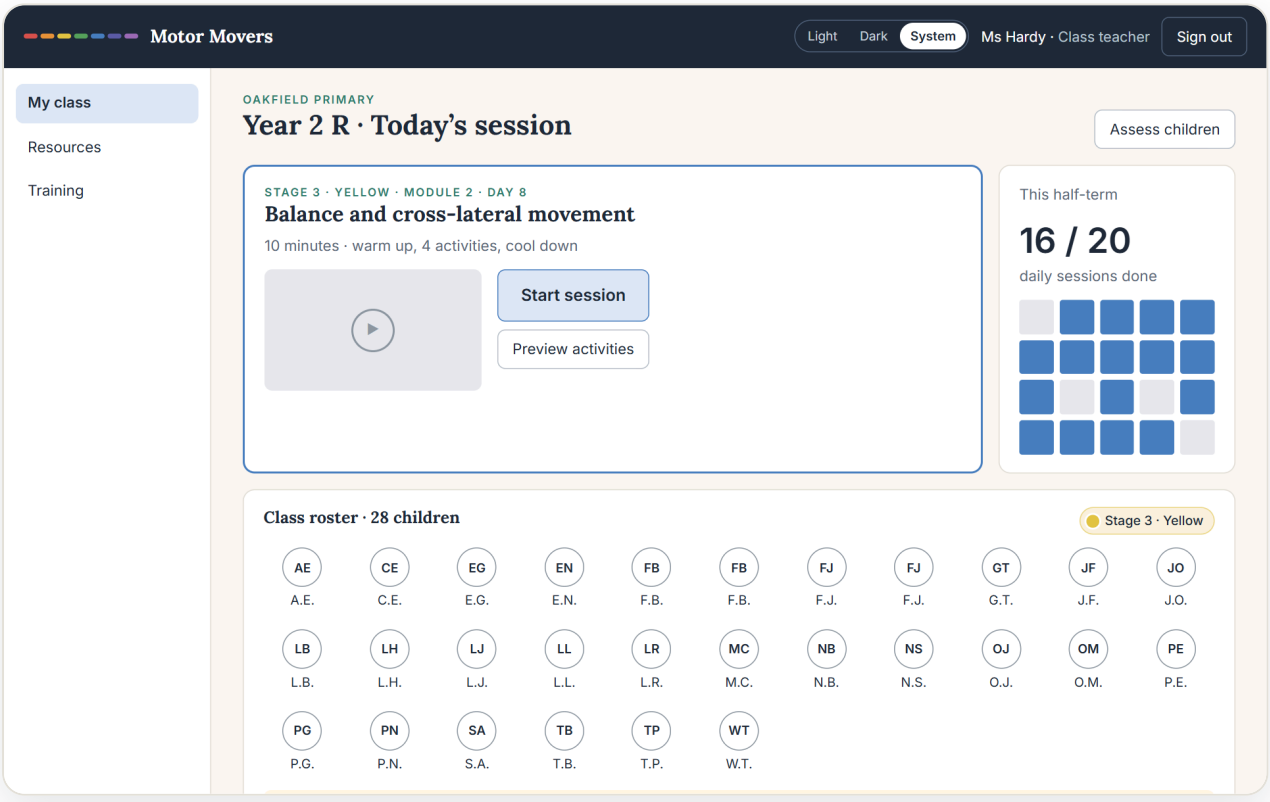

Class teacher	Running the daily session, assessing children and seeing how each child is getting on.
Head teacher and SENCo	Seeing progress across the school, setting the school up, approving training and keeping track of payments.
Trust or group lead	Summary results, licences and spending across every school in a trust or school group.
Practitioner	Booking the live Motor Movers course, joining its sessions, and earning the practitioner certificate.
Parent or carer	Following a child's progress at home with the parent app, Motor Movers at Home for families without a school, and the parent course.
Trainer	Running the live course sessions given to them, keeping the register and completing their cohorts.
Motor Movers team	Publishing content, signing schools up, running courses and trainers, and tracking income.

Motor Movers

PROTOTYPE

Class teacher guide

Running the daily session, assessing children and seeing how each child is getting on.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

A prototype in design, shown with demonstration data. Schools, people, children and figures are examples, and features and wording may change. Prepared November 2026.

AT A GLANCE

Class teacher: the journey

1 Sign in → 2 Induction (once) → 3 Today’s session → 4 Mark it done →
5 Score exercises → 6 Developmental charts → 7 Assessment profile → 8 Training

Who they are

Class teachers and teaching assistants in primary schools and early-years settings that hold a Motor Movers licence.

What they do

- Runs a guided 10-minute movement session with the class every school day.
- Assesses the class with Pat Preedy’s two assessments: the programme’s exercises scored 1 to 4, and the developmental movement charts.
- Sees an assessment profile for each child, shares progress with parents through a one-time code, and asks for a place on the practitioner course.

What they can see

Their own class only.

What stays out of view

Other classes, other schools, money or licences.

> In the design, who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

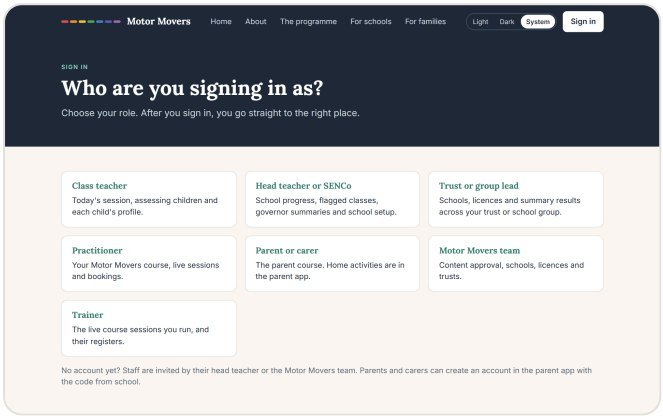

STEP BY STEP

How it works

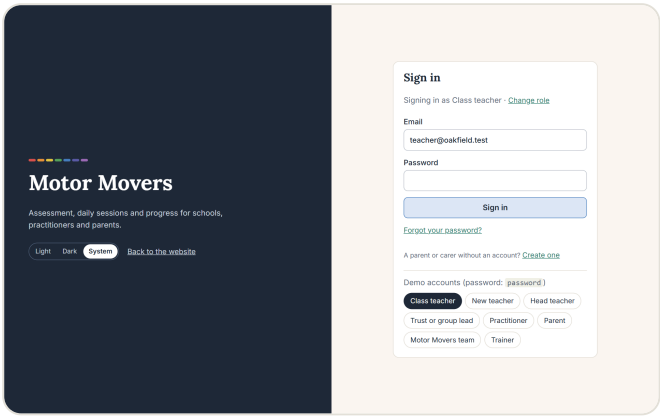

1 Sign in from the Motor Movers website

The public website explains the programme to schools and families. Staff choose “Sign in”, pick their role, and sign in with the email and password set up by their head teacher.

Why it matters: One front door for everyone: each person lands straight on the screen that matters to them.

Choosing a role on the website.

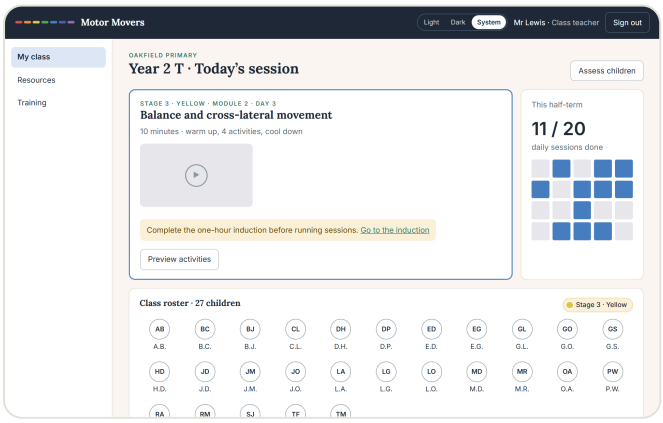

The sign-in page for class teachers.

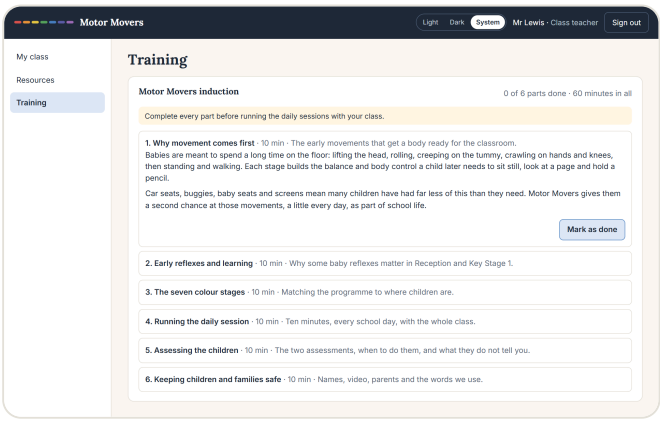

2 Complete the one-hour induction first

A new teacher cannot run sessions until they have finished the induction: six short parts, about an hour in total, covering why movement matters, how a session runs, assessment, and keeping children safe. Their class page explains this and links straight to it.

Why it matters: Every adult running Motor Movers has had the same grounding, so sessions are delivered the way the programme intends.

A new teacher sees that sessions unlock after the induction.

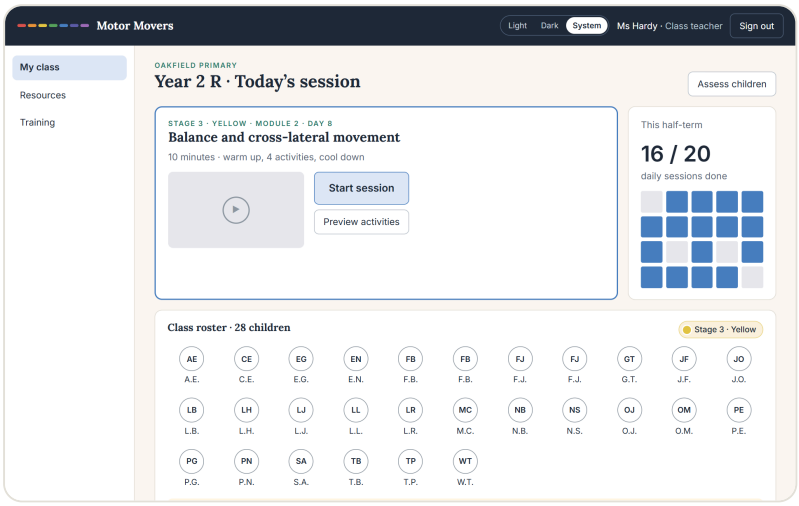

The induction, one part at a time, ticked off as it is done.

3 Open today’s session

The teacher’s home screen shows today’s session, chosen automatically from the class’s colour stage, module and day. Beside it, a 20-day counter shows how many of the last 20 school days had a session. Below is the class list, shown by initials.

Why it matters: No planning needed: the teacher always knows what to do next, and can see at a glance how regularly the class is moving.

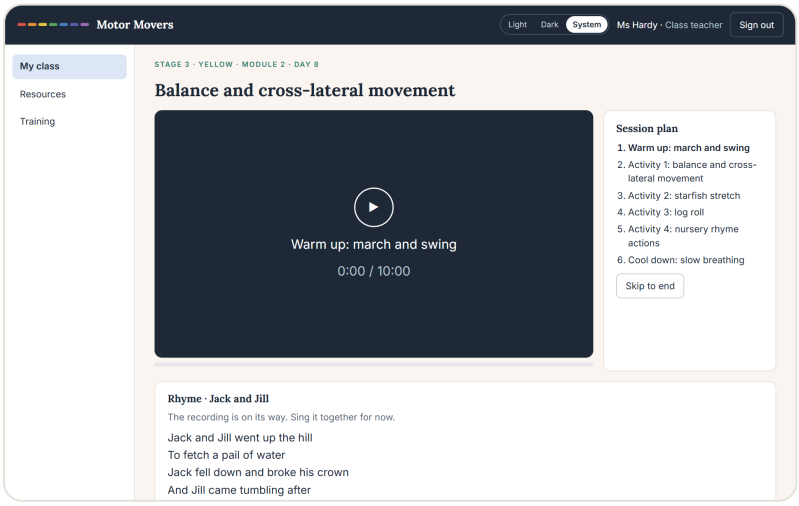

Today’s session for Year 2 R, with 16 of the last 20 school days done.

4 Run the session with the class

The session player walks the class through a warm-up, four activities and a cool-down, with a timer and the session plan alongside. Many sessions include a nursery rhyme with its words on screen. Filmed demonstration videos are being added; until then the plan and timer guide the session.

Why it matters: Ten minutes a day, ready to go, with no equipment or specialist knowledge needed.

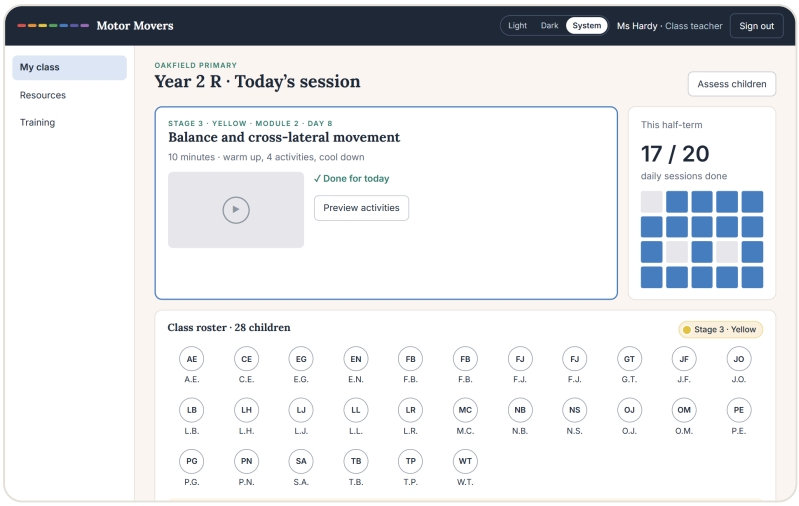

The session player: plan on the right, the rhyme and its words below.

5 Mark the session as done

At the end the teacher taps any child who was absent and marks the session complete. The day turns green on the counter (now 17 of 20) and the class moves on to the next session tomorrow. Sessions can only be recorded on school days.

Why it matters: This one tap is what lets the head teacher see participation across the school without any extra paperwork.

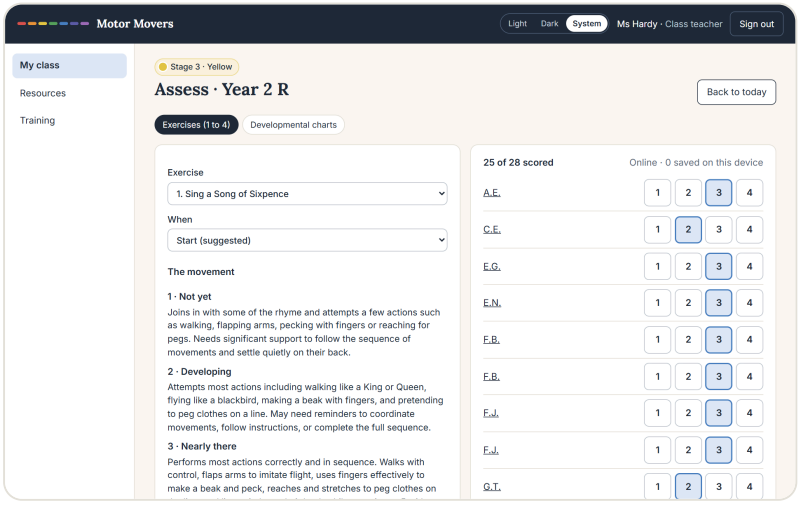

Done for today: the counter has gone up to 17 of 20.

6 Score the class on the programme's exercises

At the start of each colour, at the end of each module and at the end of the colour, the teacher scores the whole class on each exercise from 1 to 4: Not yet, Developing, Nearly there, Confident and accurate. Pat's description of each score is beside the class list, and the platform suggests which point comes next. Scores are saved on the device first, so assessing carries on if the internet drops.

Why it matters: Quick, consistent observations of the very exercises the class does every day, made during the session itself.

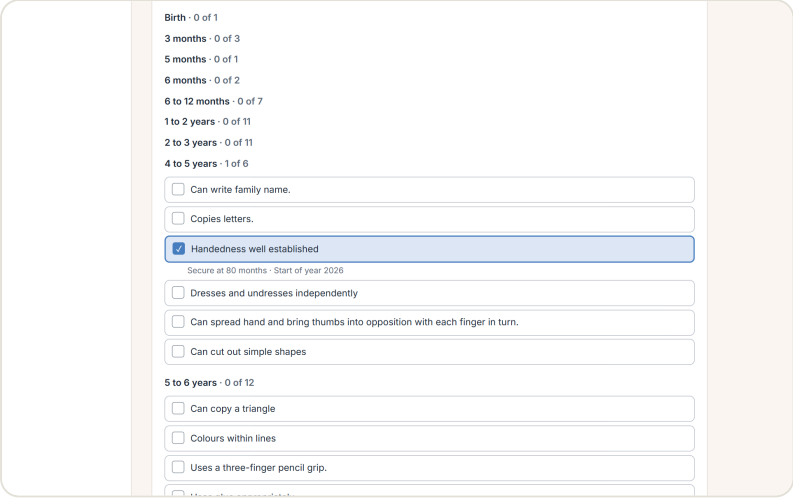

Scoring Year 2 R on one exercise, with the description of each score.

7 Record movements on the developmental charts

At the start, middle and end of the school year the teacher opens each child’s fine and gross motor charts, from birth to seven years, and taps each movement the child does confidently and securely. The platform records the child’s age in months; no date of birth is held.

Why it matters: A picture of each child’s physical development over time, in the words of Pat Preedy’s assessment booklet.

A child’s developmental charts, with a movement just recorded as secure.

8 See each child’s assessment profile

The profile brings both assessments together: movements secure on each chart, the table of exercise scores at every point, start and end totals, and the teacher’s summary comments. Where a pattern of low scores shows, it says “May benefit from extra support”, with the reasons and never a cause. Every profile states clearly that it is not a diagnosis. From here the teacher can create a one-time code that lets a parent follow the child in the parent app.

Why it matters: Teachers can see progress over time and spot children who need more help, without labelling children.

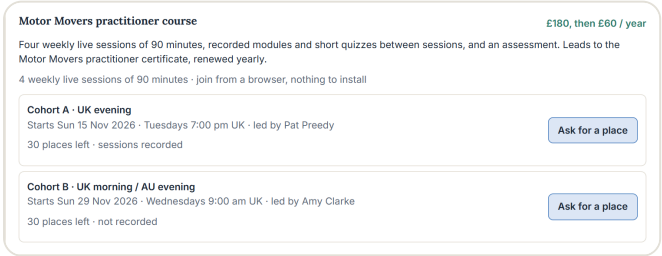

An assessment profile. “Not a diagnosis” is always shown, and every view of the record is logged.

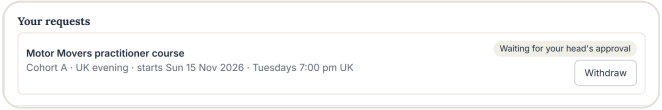

9 Ask for a place on the practitioner course

The school pays for its staff’s training, so a teacher asks for a place rather than booking it. The head teacher is emailed, approves or declines it, and the place is booked once approved. The request waits on the teacher’s Training page until then, and can be withdrawn.

Why it matters: Staff can grow their skills, and the school stays in control of what it spends.

“Ask for a place” on the practitioner course.

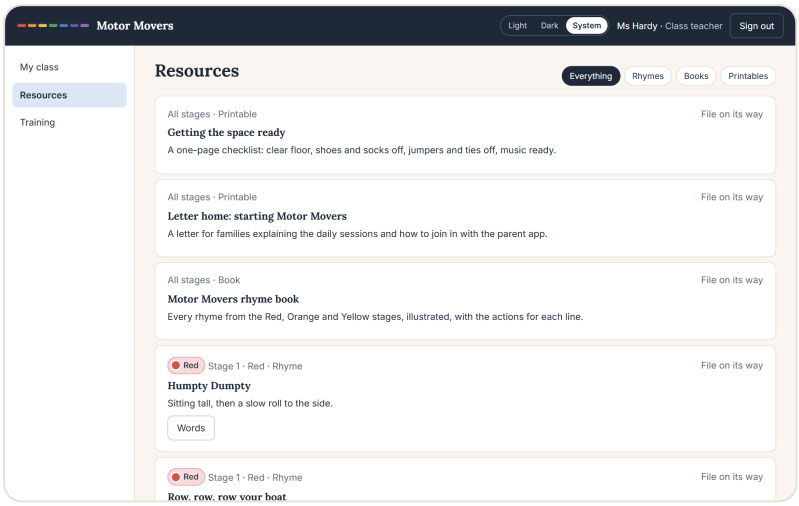

The request, waiting for the head’s approval.

10 Use the resource library

The library holds the Motor Movers rhyme book, the nursery rhymes with their words, and printable sheets, filtered to the stages the school has licensed.

Why it matters: Everything a teacher needs for the programme is in one place.

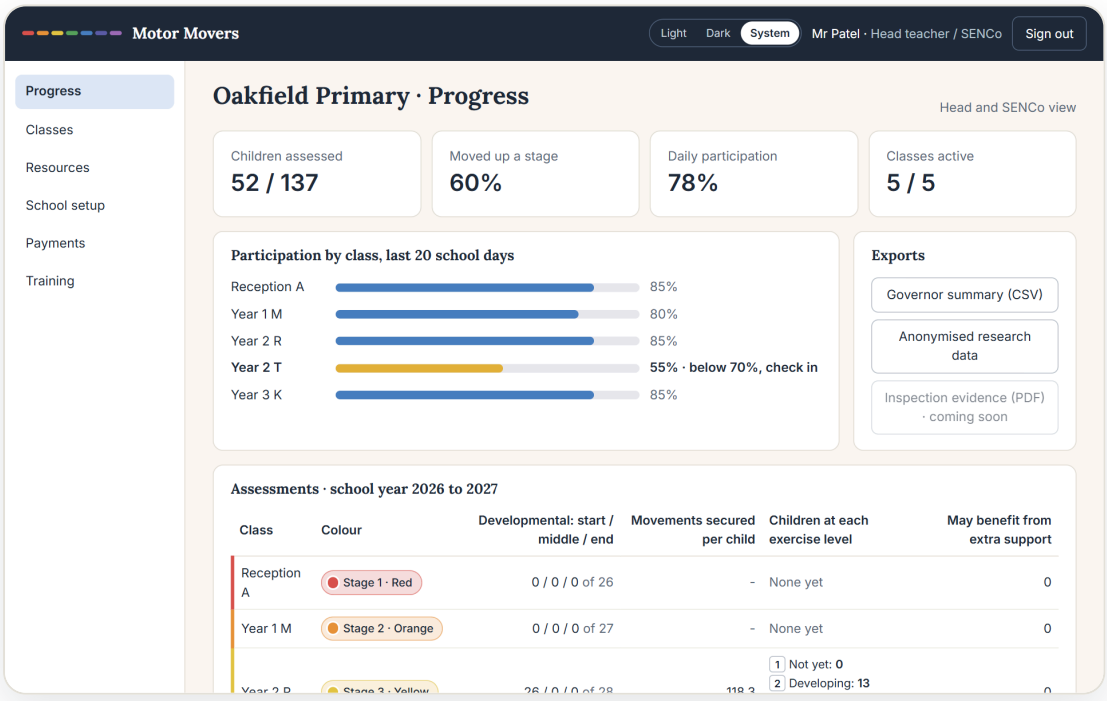

The resource library: the rhyme book, rhymes and printables.

Motor Movers

PROTOTYPE

Head teacher and SENCo guide

Seeing progress across the school, setting the school up, approving training and keeping track of payments.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

A prototype in design, shown with demonstration data. Schools, people, children and figures are examples, and features and wording may change. Prepared November 2026.

AT A GLANCE

Head teacher and SENCo: the journey

1 Progress dashboard → 2 Assessments → 3 Spot classes to support →
4 School setup → 5 Classes and children → 6 Approve training → 7 Payments

Who they are

Head teachers, SENCos and other senior leaders responsible for Motor Movers in a school.

What they do

- Sees both assessments, progress and daily participation for every class, with classes and children that may need support flagged.
- Sets the school up: invites staff, creates classes, adds children and records leavers.
- Approves staff course places, sees the school's invoices and pays them by card.

What they can see

Everything for their own school.

What stays out of view

Other schools, or staff members' personal course payments.

> In the design, who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

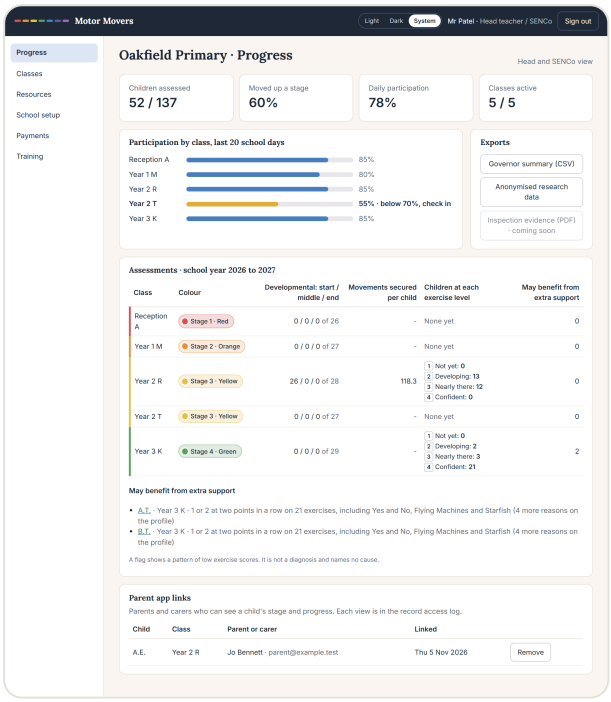

STEP BY STEP

How it works

1 See the whole school at a glance

The progress dashboard shows how many children have been assessed, how many have moved up a stage, the school’s daily participation, and how many classes are active. Participation is shown class by class for the last 20 school days. A class below 70% is highlighted so the head can check in with the teacher.

Why it matters: Leaders can see the programme is happening every day and where a class might need support, without chasing anyone.

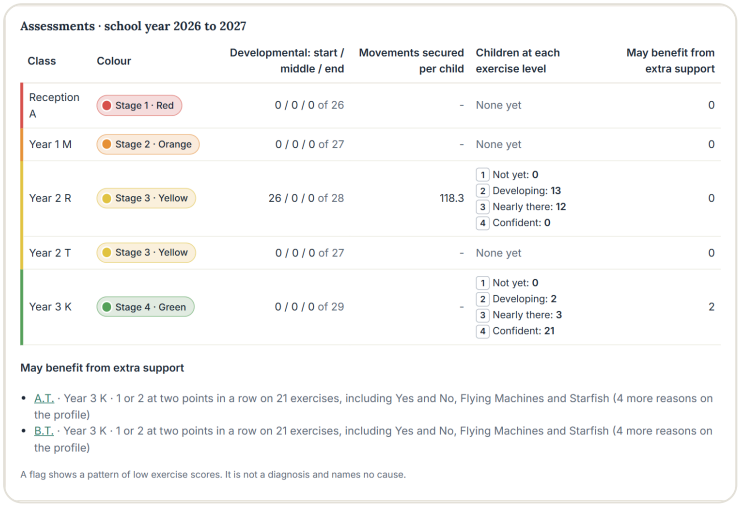

Oakfield Primary: daily participation class by class, with Year 2 T flagged.

2 Follow both assessments, class by class

For each class, with its colour, the head sees how many children have been assessed at each point this school year, the average movements secured per child on the developmental charts, and how many children are at each exercise level. Children who may benefit from extra support are listed with the first reason, and open straight into their profile.

Why it matters: The SENCo can see which children need more help early, and talk it through with the class teacher.

Assessments · school year 2026 to 2027

Class	Colour	Developmental: start / middle / end	Movements secured per child	Children at each exercise level	May benefit from extra support
Reception A	Stage 1 · Red	0 / 0 / 0 of 26	-	None yet	0
Year 1 M	Stage 2 · Orange	0 / 0 / 0 of 27	-	None yet	0
Year 2 R	Stage 3 · Yellow	26 / 0 / 0 of 28	118.3	1 Not yet: 0 2 Developing: 13 3 Nearly there: 12 4 Confident: 0	0
Year 2 T	Stage 3 · Yellow	0 / 0 / 0 of 27	-	None yet	0
Year 3 K	Stage 4 · Green	0 / 0 / 0 of 29	-	1 Not yet: 0 2 Developing: 2 3 Nearly there: 3 4 Confident: 21	2

May benefit from extra support

- A.T. · Year 3 K · 1 or 2 at two points in a row on 21 exercises, including Yes and No, Flying Machines and Starfish (4 more reasons on the profile)
- B.T. · Year 3 K · 1 or 2 at two points in a row on 21 exercises, including Yes and No, Flying Machines and Starfish (4 more reasons on the profile)

A flag shows a pattern of low exercise scores. It is not a diagnosis and names no cause.

Assessments across Oakfield Primary, with two children who may benefit from extra support.

3 Share results with governors and researchers

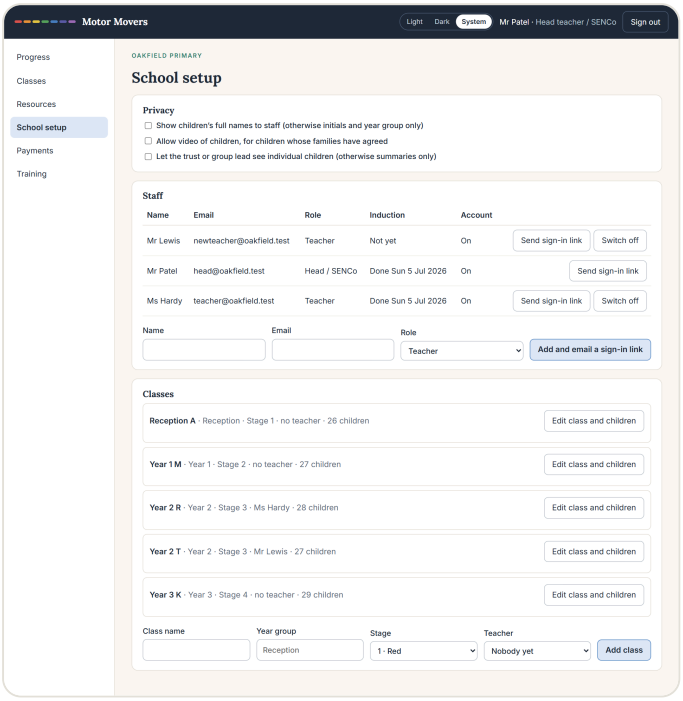

One click downloads a governor summary spreadsheet. An anonymised research download is also available. The dashboard lists which parents can see which children through the parent app, and the head can remove a link at any time.

Why it matters: Evidence of impact for governors and inspections, with no extra data entry.

4 Set the school up

School setup is where the head invites staff (each receives an email to choose a password), switches accounts off when staff leave, creates classes and assigns teachers. Privacy settings let the school decide whether staff see children’s full names or initials only, and whether the trust or school group may see child-level results.

Why it matters: The school stays in control of its own people and its own children’s records.

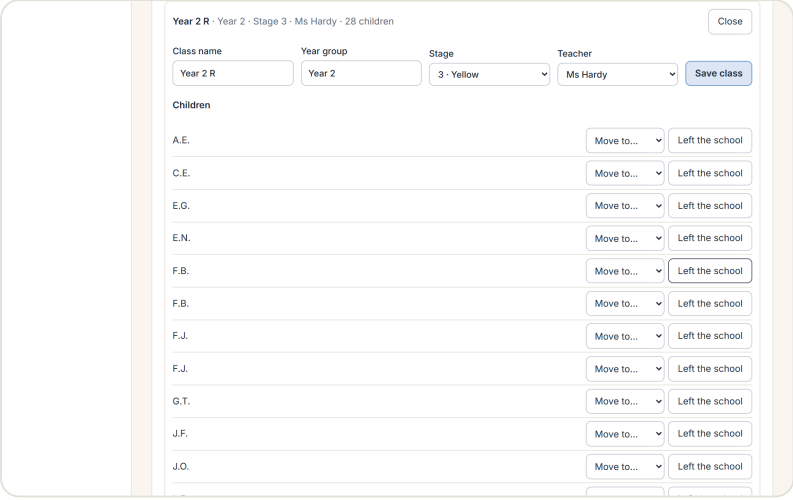

School setup: staff, classes and privacy settings.

5 Manage classes and children

Opening a class shows its stage, teacher and children. Children are added by initials (one per line), moved between classes, or marked as having left. Records of children who have left are deleted automatically a year after they leave.

Why it matters: A light-touch register that keeps only what the programme needs, for only as long as it is needed.

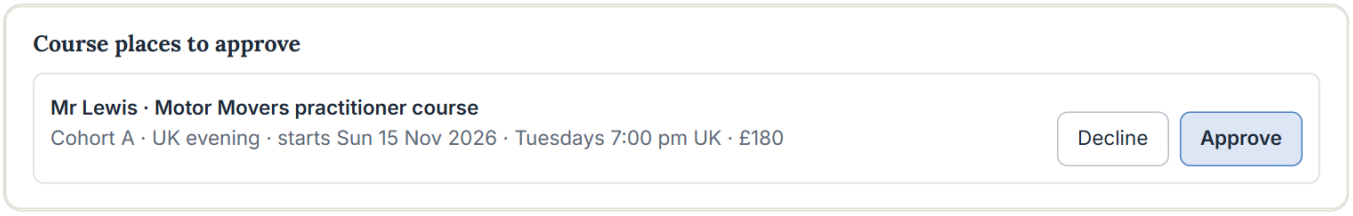

Year 2 R: the class details and its children, each with “Move to” and “Left the school”.

6 Approve staff course places

When a member of staff asks for a place on a paid course, the head is emailed and the request waits at the top of the school’s Payments page. Approving books the place and adds the invoice to the school’s account; declining books nothing and lets the member of staff know.

Why it matters: No training is charged to the school without the head’s say-so.

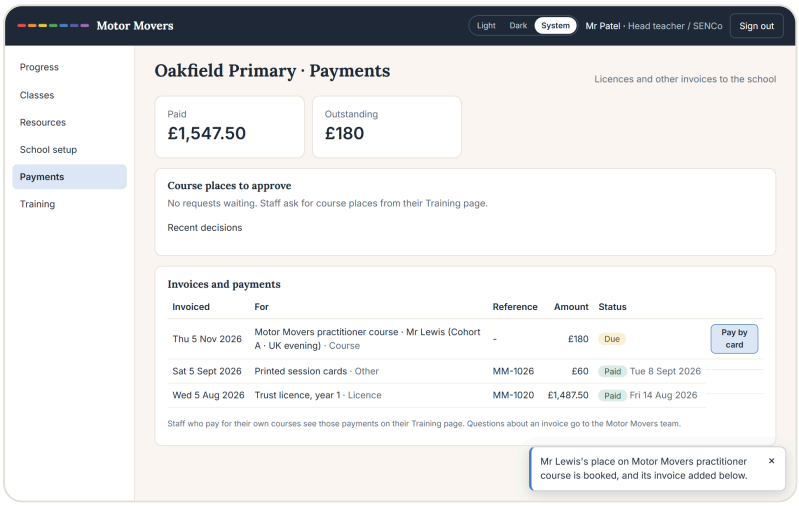

A teacher’s request for the practitioner course, with its price, ready to approve.

7 Check invoices and pay by card

The Payments page lists every invoice the school has had, what it was for, and whether it is paid, with totals paid and outstanding. An invoice that is due can be paid by card on the payment provider’s secure page; it shows as paid once the payment goes through.

Why it matters: A clear record for the school business manager, and a quick way to pay without bank transfers.

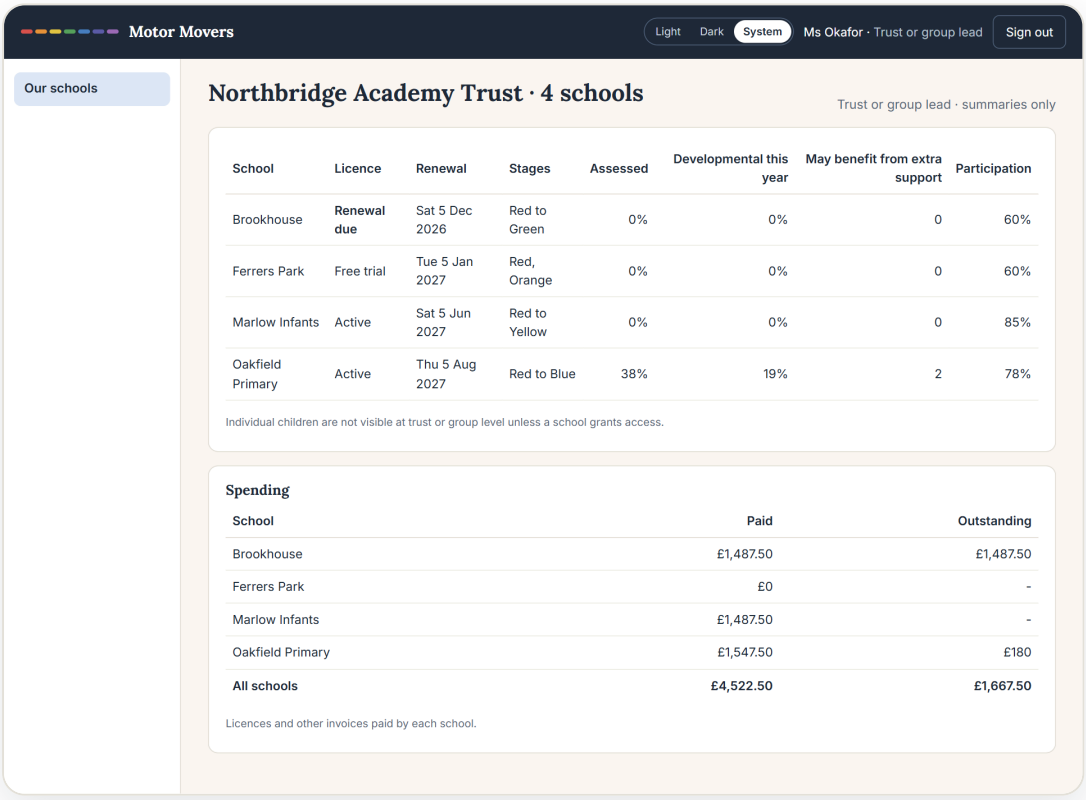

The approved course place, now invoiced, with “Pay by card”.

Motor Movers

PROTOTYPE

Trust or group lead guide

Summary results, licences and spending across every school in a trust or school group.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

A prototype in design, shown with demonstration data. Schools, people, children and figures are examples, and features and wording may change. Prepared November 2026.

AT A GLANCE

Trust or group lead: the journey

1 Sign in → 2 Schools and licences → 3 Assessment and participation → 4 Spending by school

Who they are

The person in an academy trust or other group of schools, including independent groups, who oversees Motor Movers across its schools.

What they do

- Sees each school’s licence, renewal date and licensed stages.
- Compares assessment and daily participation across schools.
- Sees what each school has paid and still owes.

What they can see

Summaries for the schools in their trust or group.

What stays out of view

Individual children, unless a school chooses to share them.

> In the design, who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

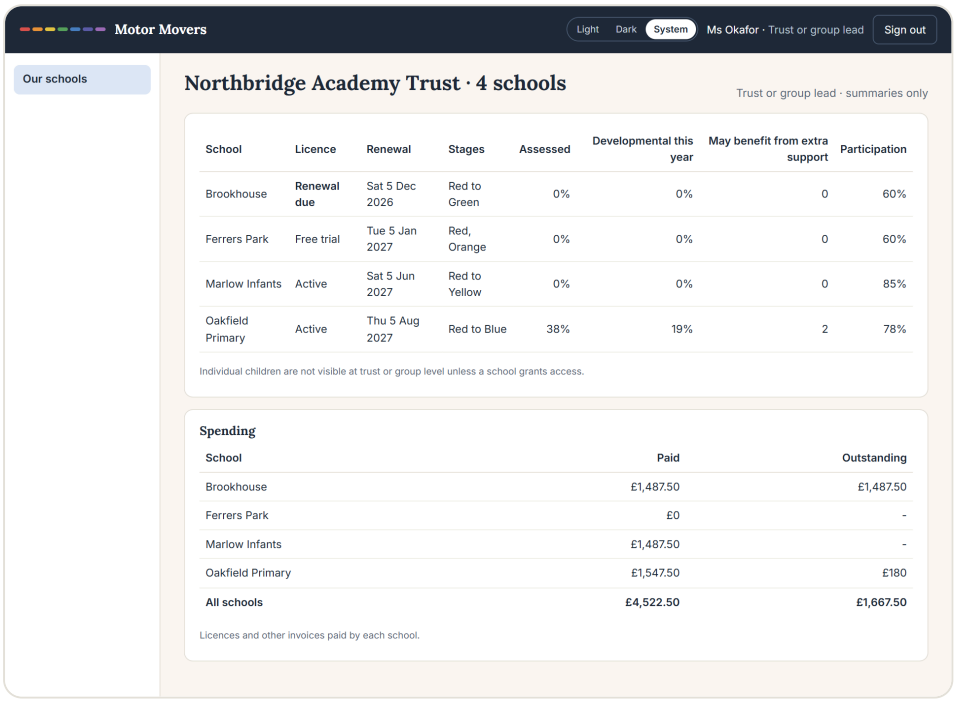

STEP BY STEP

How it works

1 One page for the whole trust or group

The trust or group page lists every school with its licence status (active, renewal due, free trial), renewal date, licensed stages, the share of children assessed, the share developmentally assessed this school year, how many children may benefit from extra support, and daily participation. Underneath, a spending table shows what each school has paid and what is outstanding, with a total for the trust or group.

Why it matters: Trust and group leaders can compare schools, plan renewals and budget, without seeing any child's personal record.

Northbridge Academy Trust: four schools, their licences, results and spending.

2 Privacy by design

Trust and group leads see totals and percentages only. Individual children stay invisible at that level unless a school switches on sharing in its own privacy settings. This rule is enforced by the platform itself, not just hidden on screen.

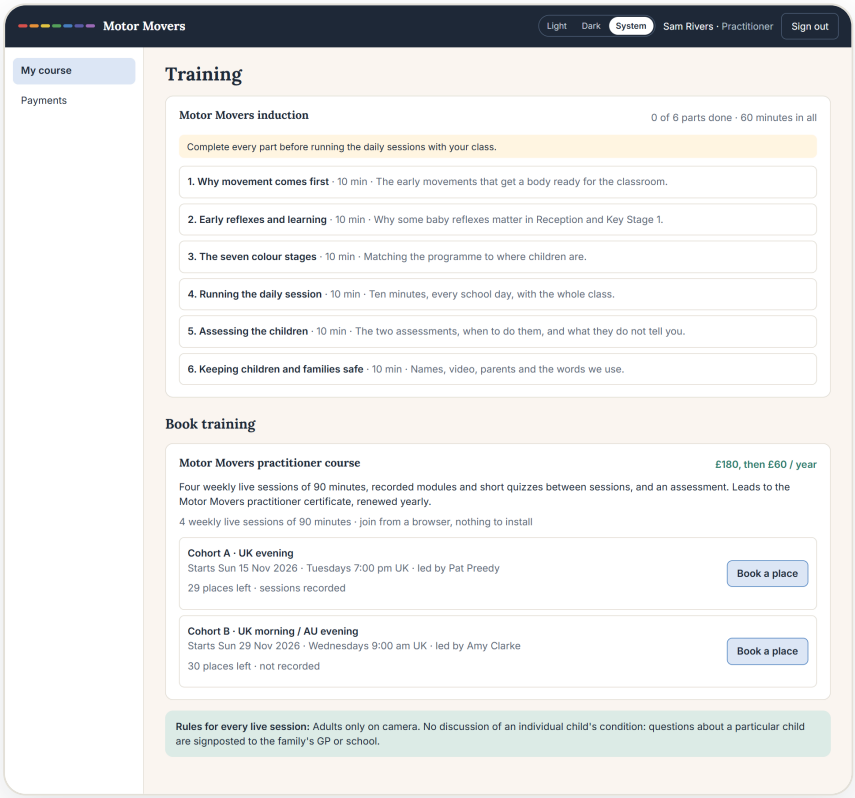

Why it matters: Schools can join a trust-wide or group-wide rollout with confidence that their children's records stay with them.

Motor Movers

PROTOTYPE

Practitioner guide

Booking the live Motor Movers course, joining its sessions, and earning the practitioner certificate.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

A prototype in design, shown with demonstration data. Schools, people, children and figures are examples, and features and wording may change. Prepared November 2026.

AT A GLANCE

Practitioner: the journey

1 Choose a cohort → 2 Book a place → 3 Join live sessions → 4 Quizzes → 5 Assessment → 6 Certificate

Who they are

Teachers, teaching assistants, therapists and early-years staff training to deliver Motor Movers.

What they do

- Books a place on a cohort of the practitioner course.
- Joins the live sessions on Zoom from the platform, and takes a short quiz after each one.
- Receives the certificate by email, renewed yearly, and pays online by card.

What they can see

Their own bookings, progress and payments.

What stays out of view

Children’s records or anyone else’s bookings.

> In the design, who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

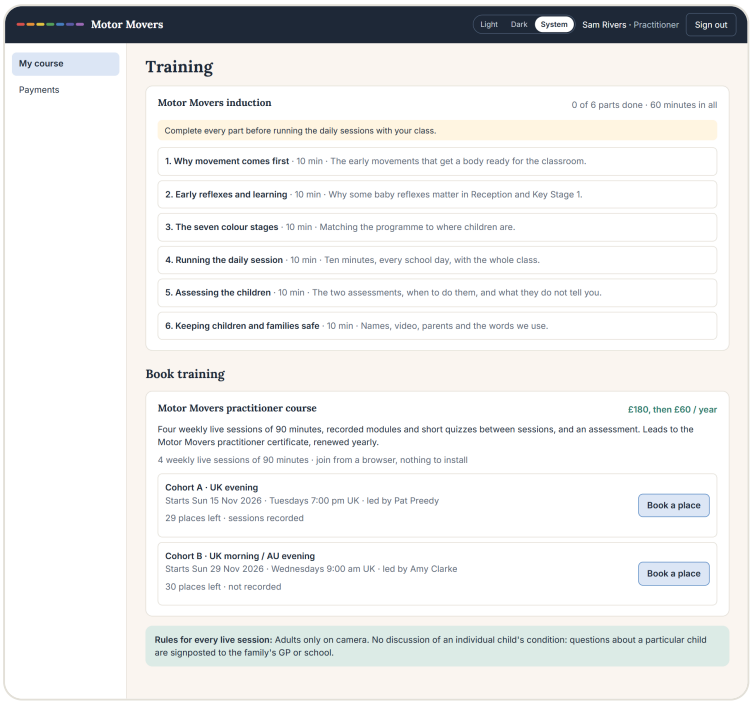

STEP BY STEP

How it works

1 Find the course and pick a cohort

The Training page describes the practitioner course: four weekly live sessions of 90 minutes, short quizzes between sessions, and an assessment. Each cohort shows its start date, day and time, trainer, places left, and whether sessions are recorded.

Why it matters: Everything needed to choose a course is on one page, with UK evening and UK morning (Australian evening) options.

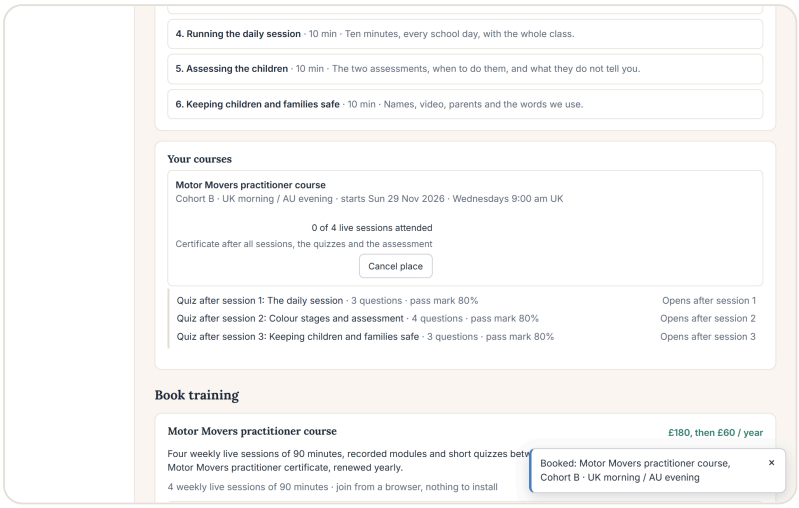

The Training page with the induction and the practitioner course.

2 Book a place and join the live sessions

One click books a place. “Your live sessions” lists the dates, shown in the learner’s own time zone, and a Join button appears 15 minutes before each one starts. The session opens inside the platform with the meeting, the rules, and the trainer keeping the register. A reminder email arrives the day before.

Why it matters: No Zoom account or software to set up: learners join from the platform, wherever they are.

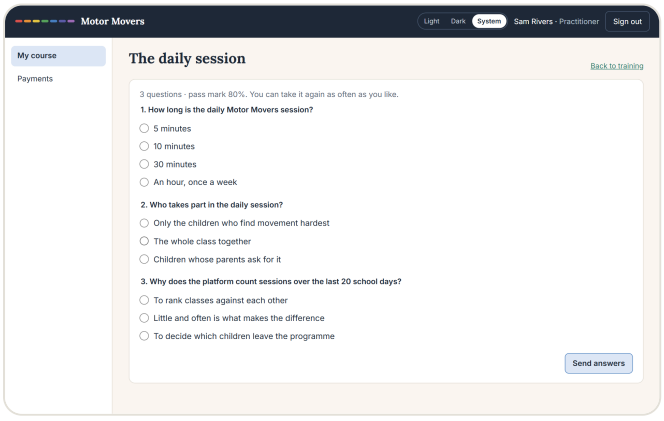

Booked onto Cohort B, with the sessions to come.

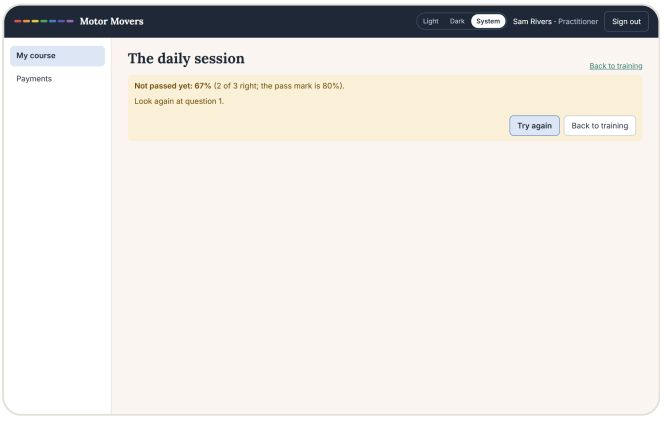

3 Take a short quiz after each session

A quiz opens once its live session has started or the learner has been marked present. It has a few multiple-choice questions and a pass mark; the learner can retake it as often as they like. The platform marks it and says which questions to look at again, without giving the answers away.

Why it matters: Learning is checked between sessions, so the certificate means the course was understood, not only attended.

A quiz after session 1.

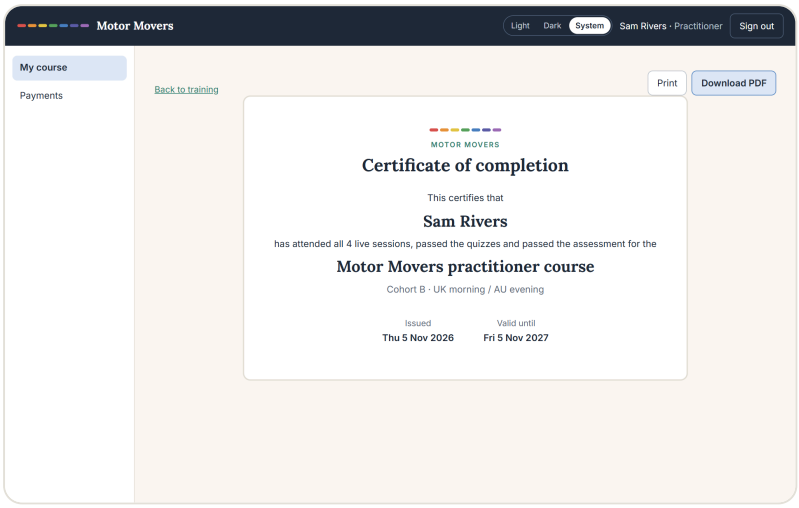

Not passed yet: the score, and the question to look at again.

4 Receive the certificate

When every live session is attended, every quiz passed and the trainer has recorded the end-of-course assessment, the certificate is issued and emailed as a PDF. It can be downloaded or printed from the platform at any time, and a reminder arrives a month before it expires.

Why it matters: A recognised, yearly-renewed certificate that schools and employers can check.

The certificate, with Download PDF and Print.

5 Rules for every live session

Every course page carries the same rules: only adults on camera, and no discussion of an individual child's condition. Questions about a particular child are signposted to the family's GP or school.

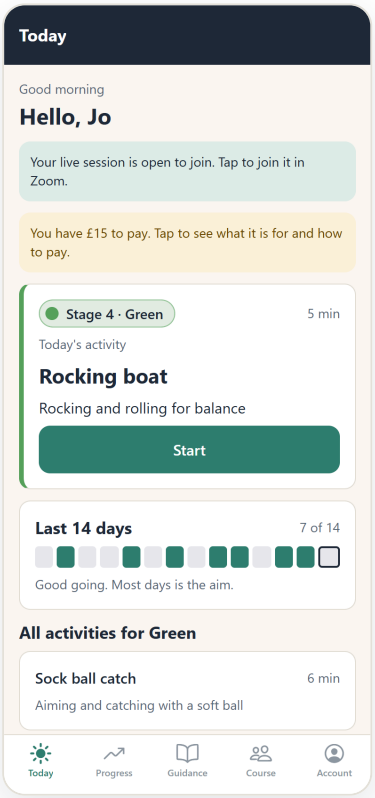

Why it matters: Live training stays safe and keeps to education, not clinical advice.

Motor Movers

PROTOTYPE

Parent or carer guide

Following a child's progress at home with the parent app, Motor Movers at Home for families without a school, and the parent course.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

A prototype in design, shown with demonstration data. Schools, people, children and figures are examples, and features and wording may change. Prepared November 2026.

AT A GLANCE

Parent or carer: the journey

1 Code from school → 2 Link child in the app → 3 Today’s activity → 4 Progress → 5 Motor Movers at Home → 6 Parent course → 7 Payments

Who they are

Parents and carers of children in Motor Movers schools, invited by the school; and, with Motor Movers at Home, any family.

What they do

- Links their child in the parent app with a one-time code from the school, and sees how they are getting on, in plain words.
- Does a short home activity or session matched to the child’s stage, most days.
- Without a school on Motor Movers: adds their child, does a short check and follows the daily sessions at home, in the app or on the website.
- Takes the live parent course in Zoom, and pays online by card.

What they can see

Only the children the school has linked to them, or their own family’s children; progress in plain words, not scores.

What stays out of view

Other children, assessment scores, the extra-support flag, or a school child once the school removes the link.

> In the design, who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

STEP BY STEP

How it works

1 Get a code from the school

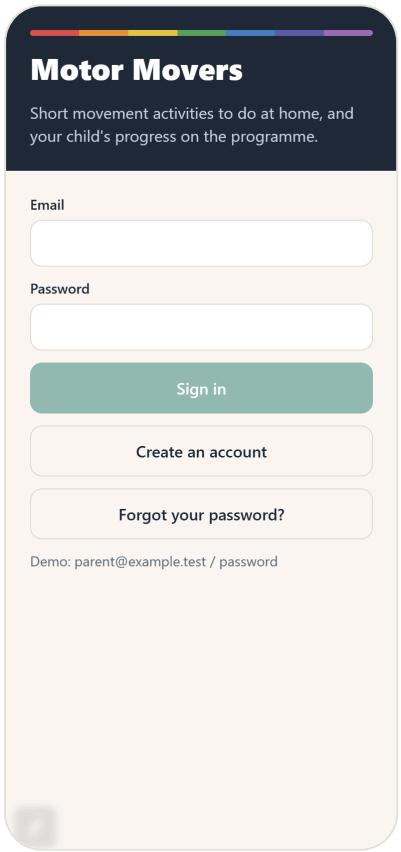

The child’s teacher creates a one-time code from the child’s profile and gives it to the parent. Each code works once. The school decides whether parent links are switched on, and can remove a link at any time.

Why it matters: Only the right adult sees a child, and the school stays in control.

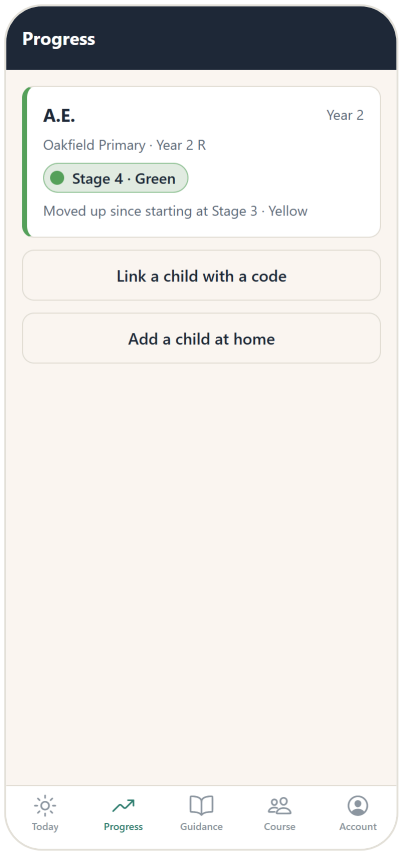

2 Sign in to the parent app and link the child

The parent app is designed for iPhone and Android phones. Parents create an account or sign in, then enter the code to link their child.

Why it matters: A familiar phone app that a parent stays signed in to for a month at a time.

Signing in to the parent app.

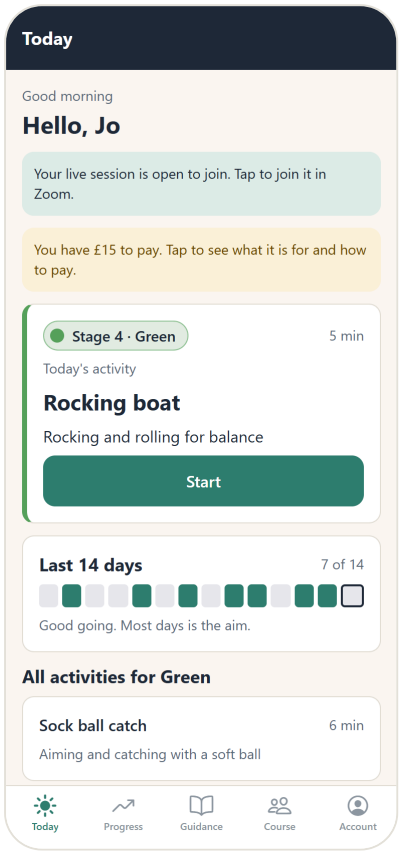

A linked child: their school, class and current stage.

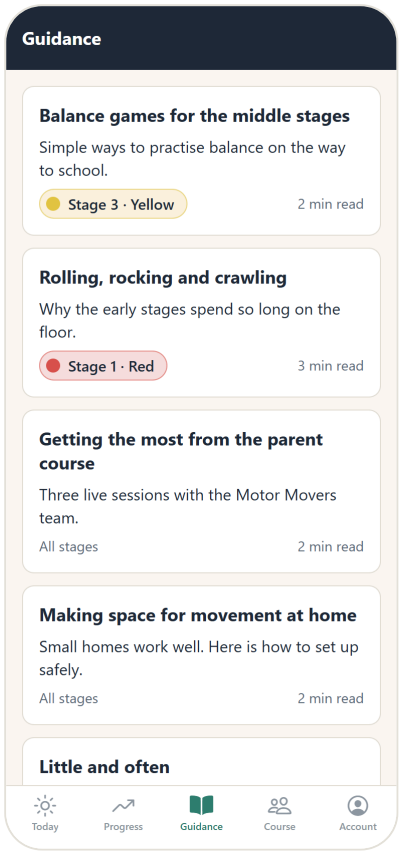

3 Do today’s activity at home

The Today screen suggests a short activity for the child’s stage, usually five or six minutes, with the steps to follow. A 14-day tracker encourages “little and often”, and the full list of activities for the stage is underneath.

Why it matters: Families keep the movement going at home in a few minutes a day, matched to what the child is doing at school.

Today’s activity and the 14-day tracker.

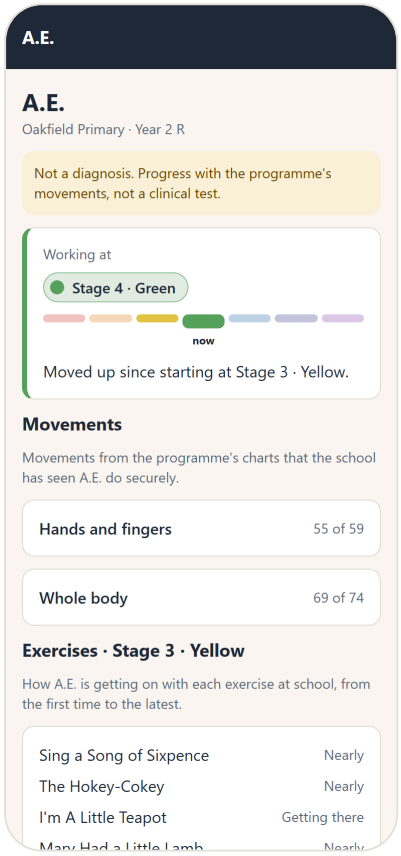

Short guidance articles, each tagged with its stage.

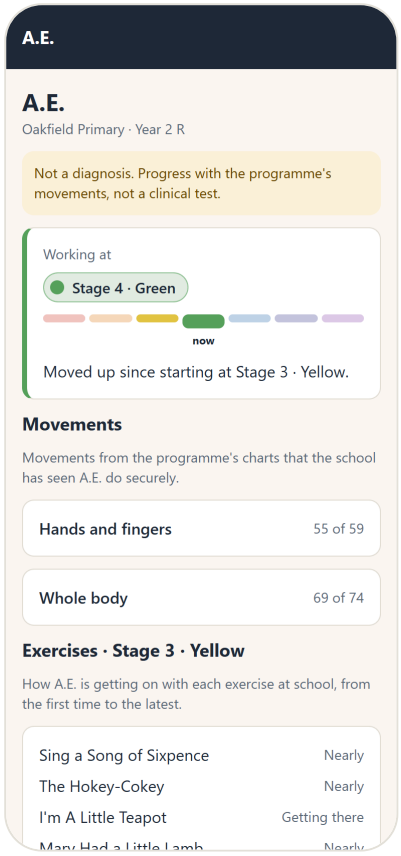

4 See how the child is getting on at school

The child's page shows the school's assessments in plain words: how many movements on the programme's two charts the school has seen the child do securely, and each exercise of the child's colour from the first time to the latest (Not yet, Getting there, Nearly, Got it). Never scores, comparisons or the extra-support flag: the school talks to the family about that.

Why it matters: Parents see real progress, in words that encourage rather than worry, and every view is logged for the school.

A linked child's page.

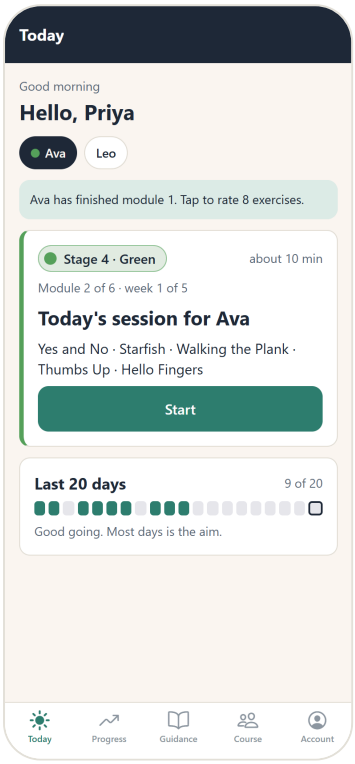

Exercises, from the first time to the latest.

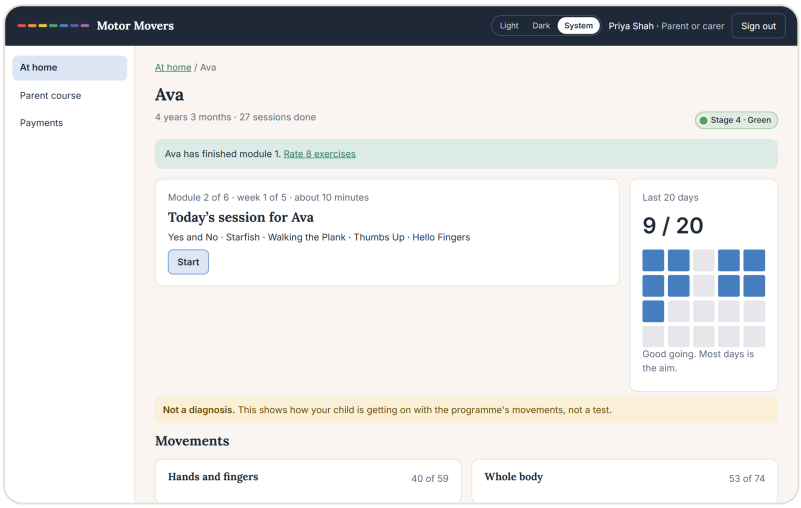

5 Motor Movers at Home: no school needed

Families whose school is not on Motor Movers can still use the programme. They create a parent account in the app or on the website, add their child (a first name or nickname and an age; no date of birth), and do a short check of movements from Pat's charts, which suggests a colour. Each day brings a ten-minute session of Pat's exercises; parents rate each exercise the first time and at the end of each module, in plain words. A second parent or carer can share by code or email, and if the school joins later the record can be shared with the teacher. It is switched on once Pat and the owner agree.

Why it matters: Any family can help their child at home, and the programme reaches children before their school signs up.

Today's session in the app.

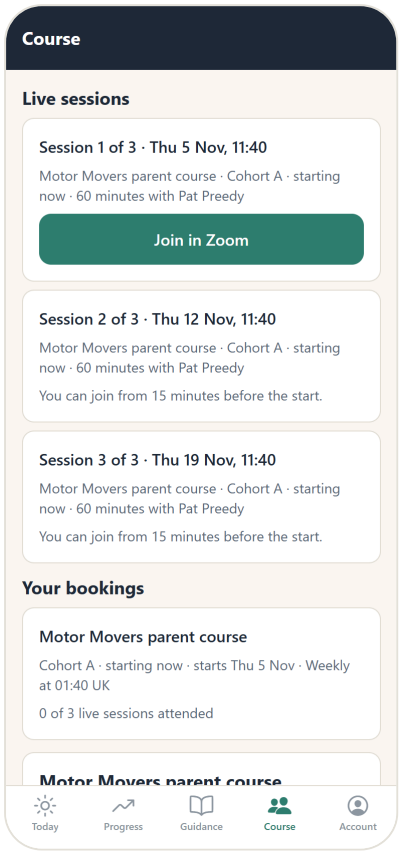

The same child on the website.

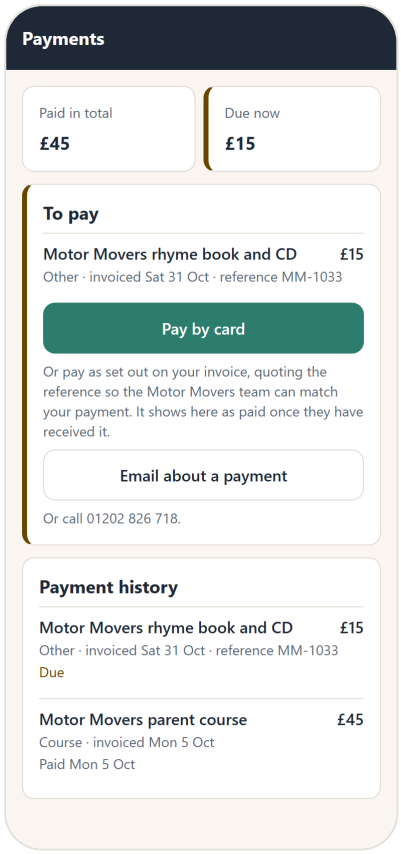

6 Take the parent course

The parent course is three weekly live sessions of 60 minutes, priced per family. Parents book in the app or on the website. When a session opens, the phone shows a notification and “Join in Zoom” opens the meeting in the Zoom app.

Why it matters: Confidence and know-how for parents, from the Motor Movers team directly, in a few taps.

Live sessions in the app, with Join in Zoom.

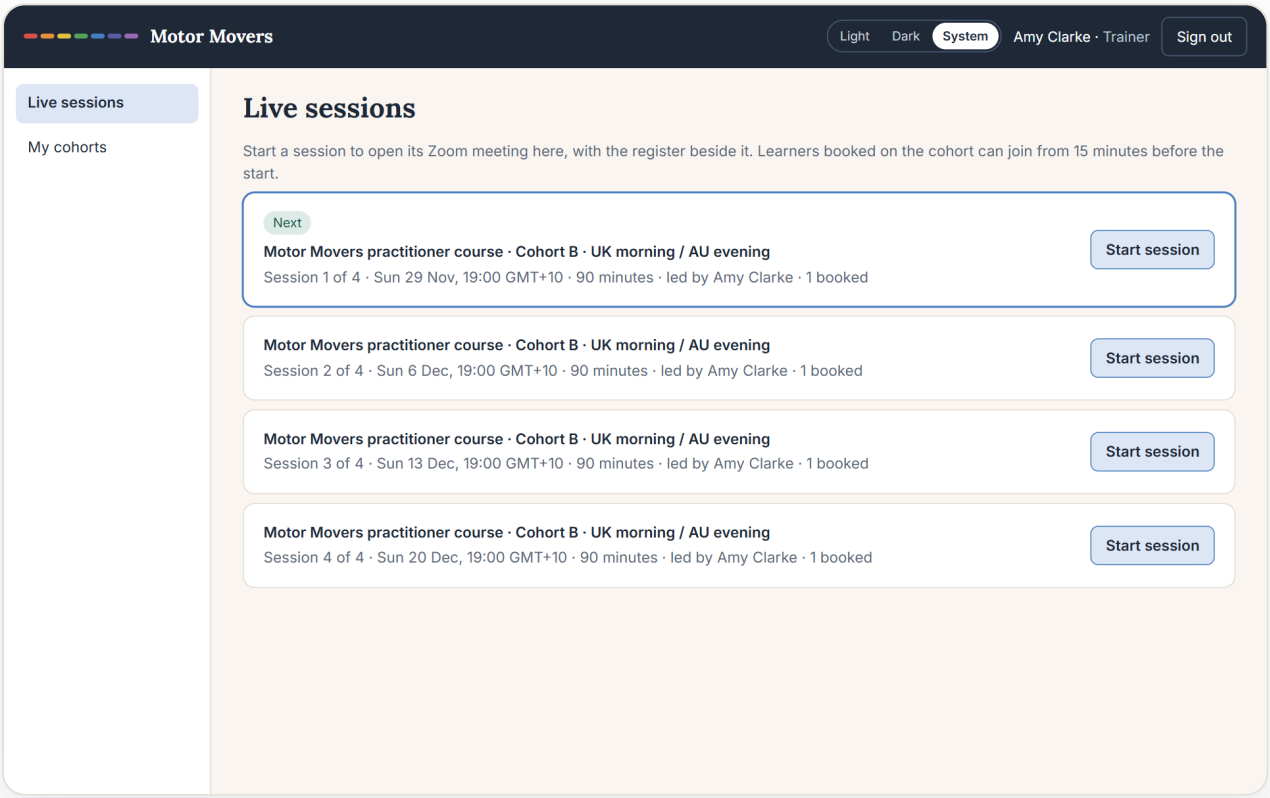

Payments, with Pay by card.

Motor Movers

PROTOTYPE

Trainer guide

Running the live course sessions given to them, keeping the register and completing their cohorts.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

ABOUT THESE SCREENS

A prototype in design, shown with demonstration data. Schools, people, children and figures are examples, and features and wording may change. Prepared November 2026.

AT A GLANCE

Trainer: the journey

1 Sign in → 2 Live sessions → 3 Start the session → 4 Register →
5 My cohorts → 6 Assessment

Who they are

Members of Pat’s training team who lead cohorts of the practitioner and parent courses.

What they do

- Starts the live sessions of their own cohorts on Zoom, inside the platform.
- Keeps the register, seeing who has joined as it happens.
- Records the end-of-course assessment, which completes the certificate.

What they can see

Only the cohorts the team has given them, and their learners.

What stays out of view

Other trainers’ cohorts, courses, schools, children or money.

> In the design, who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

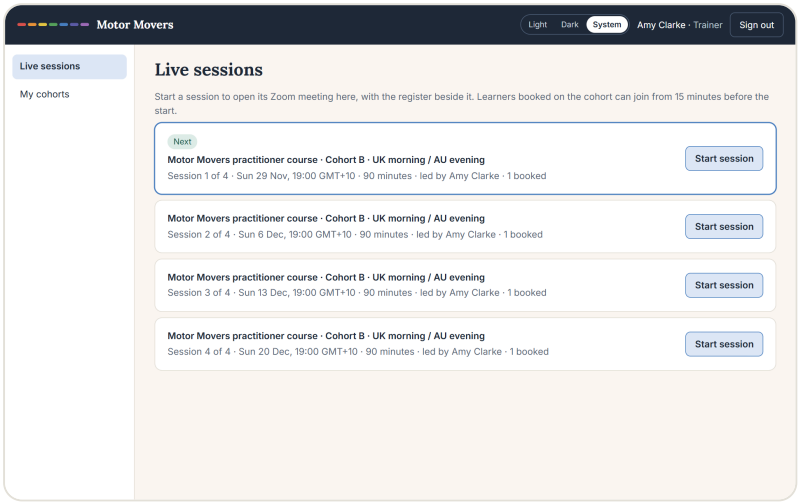

STEP BY STEP

How it works

1 See the sessions to run

A trainer signs in straight to Live sessions: every coming session of the cohorts the team has given them, with the date, time and course. A reminder email arrives the day before each one.

Why it matters: The training team can grow beyond Pat, with each trainer seeing only their own work.

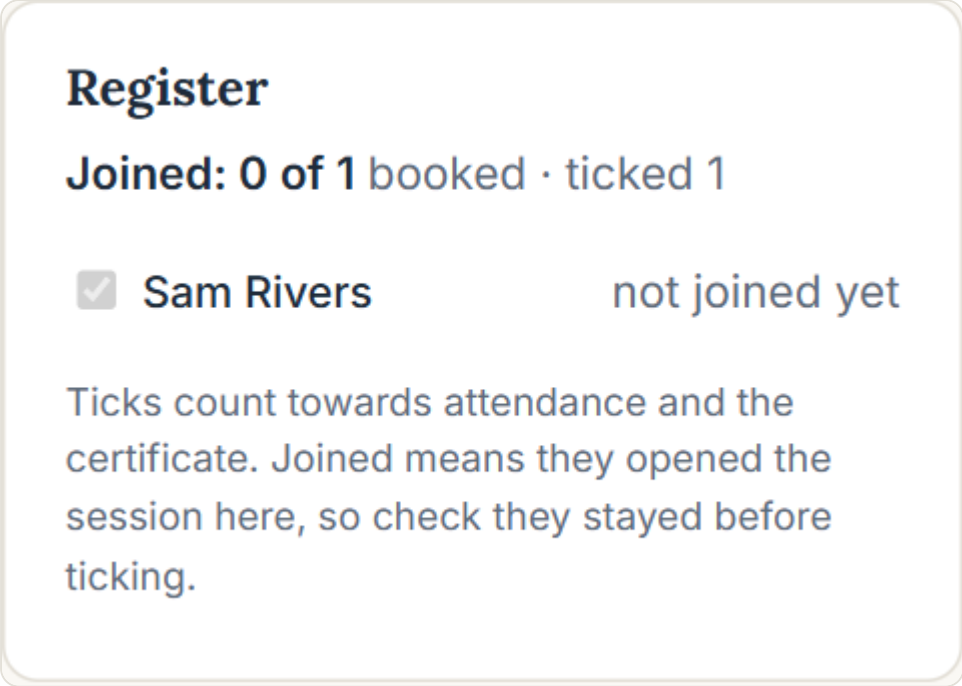

Amy's sessions: her one cohort of the practitioner course.

2 Run the session and keep the register

“Start session” opens the Zoom meeting inside the platform, already signed in as the host, with the session rules and the register beside it. The register shows who has joined and when, refreshes every 15 seconds, and one button ticks everyone who joined. Each trainer can host with their own Zoom login, so sessions can run at the same time.

Why it matters: Attendance is recorded as the session happens, and counts straight towards each learner’s certificate.

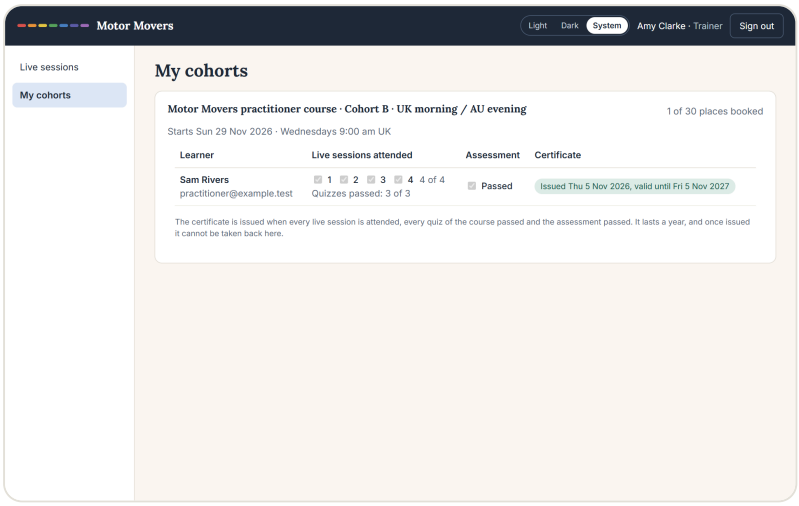

The register beside the meeting: who joined, and the ticks that count towards the certificate.

3 Complete the cohort

“My cohorts” lists each learner with their attendance, quizzes passed and the end-of-course assessment. Once everything is complete, the certificate is issued and emailed automatically.

Why it matters: The trainer finishes the job without needing the team, and the learner gets their certificate the same day.

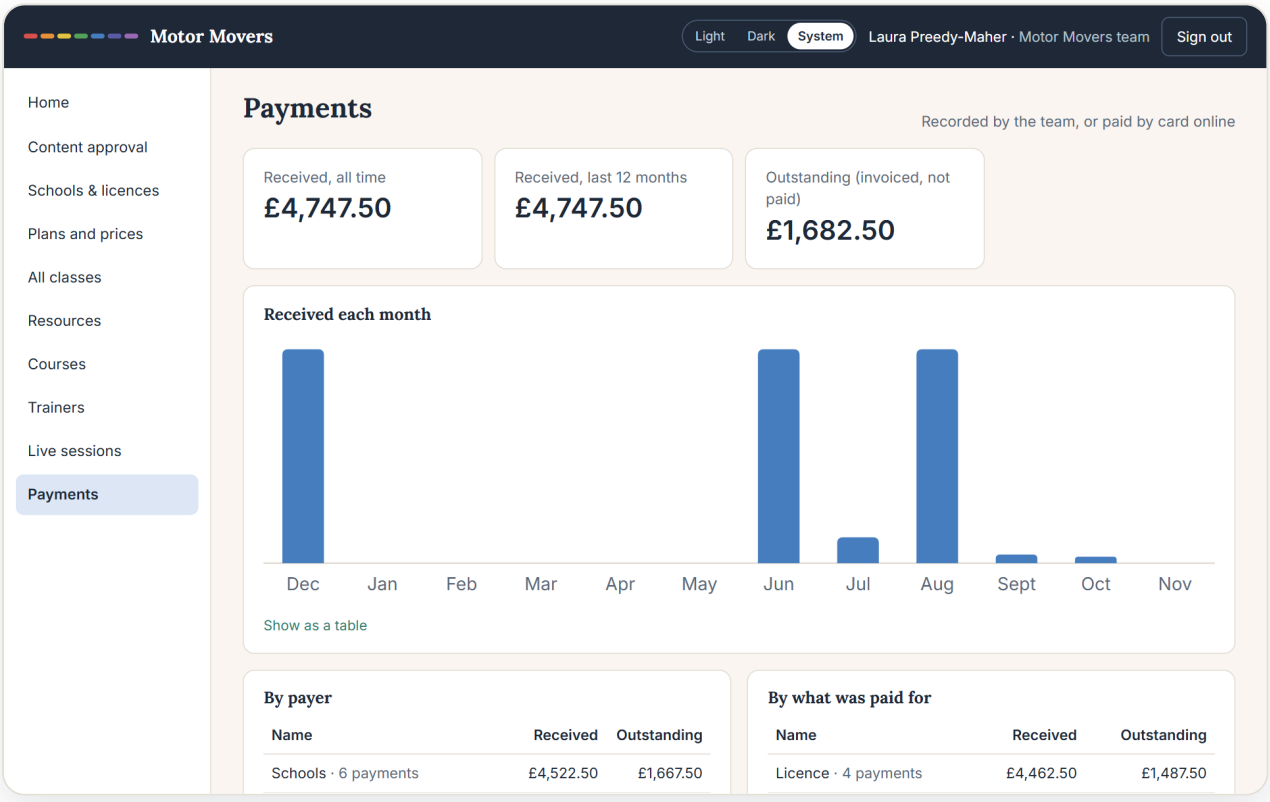

My cohorts: Sam has attended every session, passed the quizzes and been certified.

Motor Movers

PROTOTYPE

Motor Movers team guide

Publishing content, signing schools up, running courses and trainers, and tracking income.

WHO THIS IS FOR

Partners, investors and school leaders. No technical knowledge needed.

AT A GLANCE

Motor Movers team: the journey

1 Home → 2 Write content → 3 Wording check → 4 Sign schools up →
5 Courses and quizzes → 6 Trainers → 7 Payments

Who they are

The Motor Movers team who run the programme and the platform.

What they do

- Writes and approves every session, activity, article, resource and induction part before anyone sees it.
- Signs schools up, sets their licences and stages, and adds trusts or school groups and their leads.
- Runs courses, cohorts, quizzes and the training team, records payments and sees income.

What they can see

Everything across the platform.

What stays out of view

Approve wording that sounds like a diagnosis: the platform blocks it.

> In the design, who sees what is enforced by the platform itself, not only by hiding things on screen. The same rules apply on the website and in the parent app.

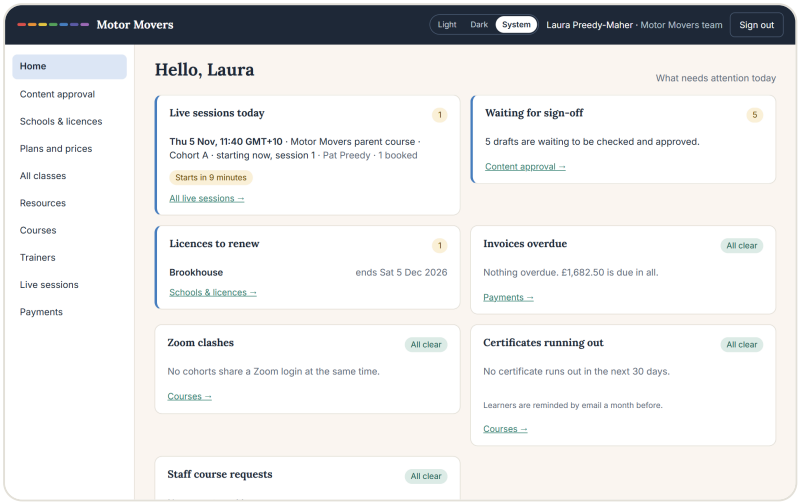

STEP BY STEP

How it works

1 Start from what needs attention

The team signs in to Home: today’s live sessions, drafts waiting for sign-off, overdue invoices, licences to renew, Zoom clashes and certificates running out, each linking to where it is done.

Why it matters: Nothing slips: the day’s work is on one page instead of spread across the platform.

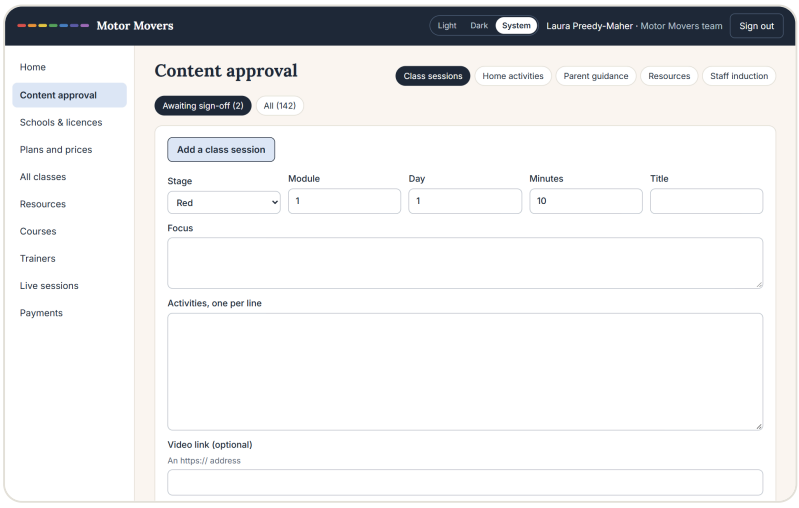

Home: what needs attention today.

2 Write new content as a draft

Each kind of content has its own tab: class sessions, home activities, parent guidance, resources and staff induction. “Add” opens a short form; the new item is saved as a draft and waits in “Awaiting sign-off”.

Why it matters: The team can grow the programme themselves, without a developer.

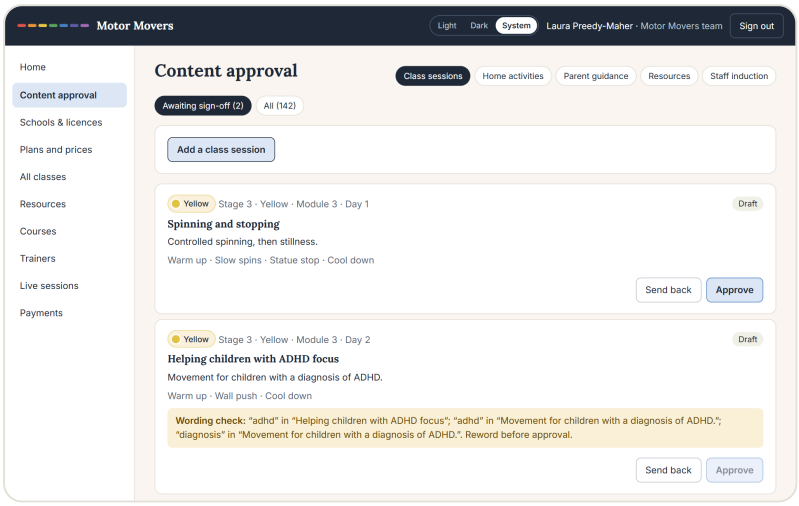

Adding a class session: stage, module, day, title, focus and activities.

3 Approve it, with a wording check

Nothing reaches teachers or parents until a member of the team approves it. The platform checks the wording first: anything that reads like a diagnosis or a medical label is highlighted, and the Approve button stays locked until it is reworded.

Why it matters: Motor Movers assesses readiness to learn; it never diagnoses. The platform enforces that promise on every word.

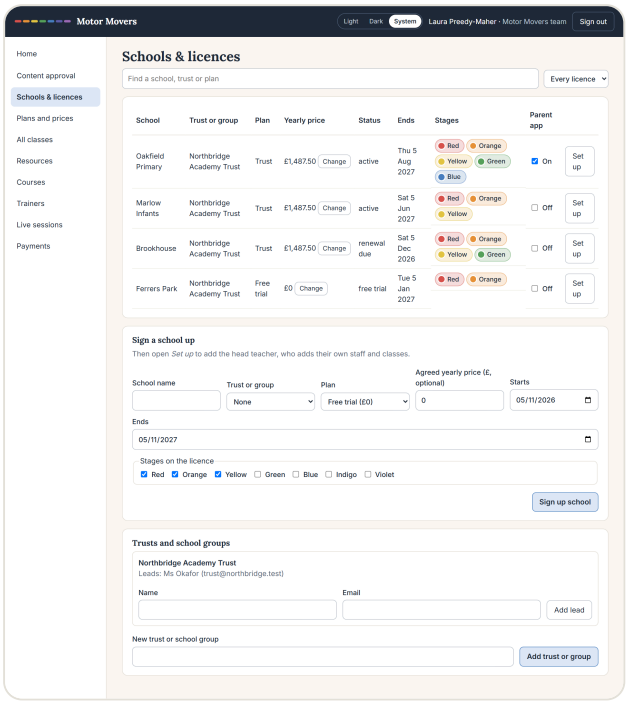

A draft mentioning “ADHD” and “diagnosis” is blocked until it is reworded.

4 Sign schools up and set their licences

Schools & licences lists every school with its trust or group, plan, licence status, end date and stages, and whether parents can use the app. From here the team signs a new school up, sets the head teacher's account, and adds trusts or school groups and their leads.

Why it matters: Onboarding a school takes minutes, and the licence decides which stages its teachers can use.

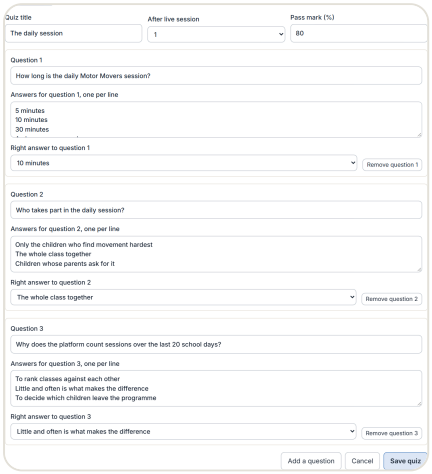

Schools & licences: four schools in one trust, with plans, stages and parent-app switches.

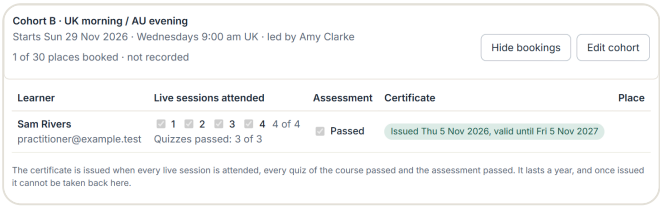

5 Run courses, cohorts and quizzes

The Courses page lists each course at a glance, and each course has its own page. There the team edits prices, opens cohorts with dates, times and a trainer, writes the quizzes between sessions (with the same wording check), and follows each learner's attendance, quizzes and assessment. A warning shows if two cohorts would need one Zoom login at the same time.

Why it matters: Training can scale with demand: a new cohort is open for booking as soon as it is saved.

Writing a quiz: questions, answers and the right one.

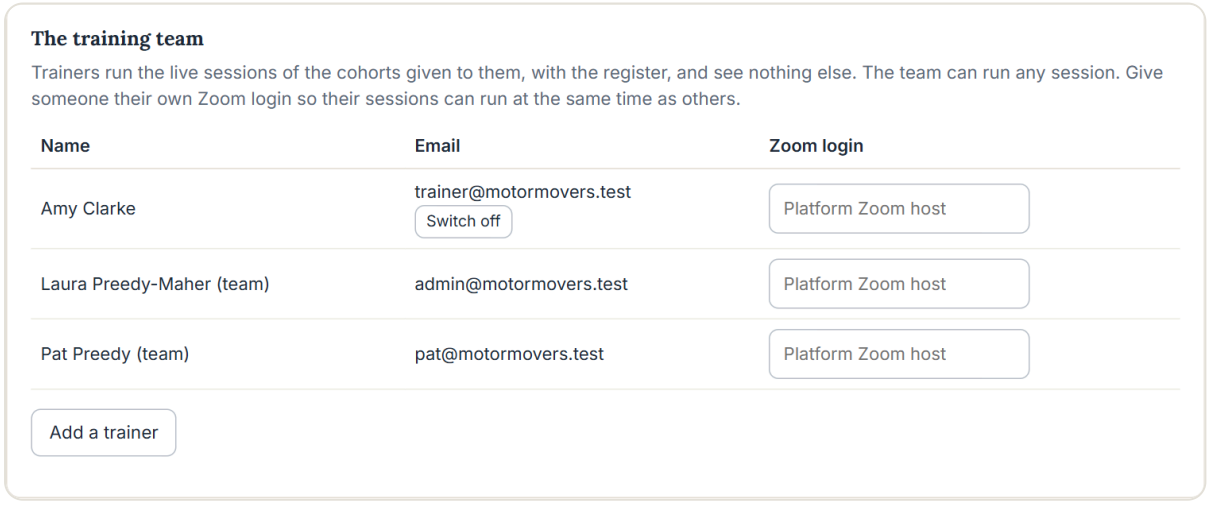

A cohort's bookings: sessions, quizzes, assessment and certificate.

6 Build the training team

Trainers are added on the Trainers page and emailed a link to choose a password. Each can have their own Zoom login, and is given cohorts to run; a trainer who leaves is switched off in one click.

Why it matters: Pat's team can run many cohorts at once, each trainer seeing only their own.

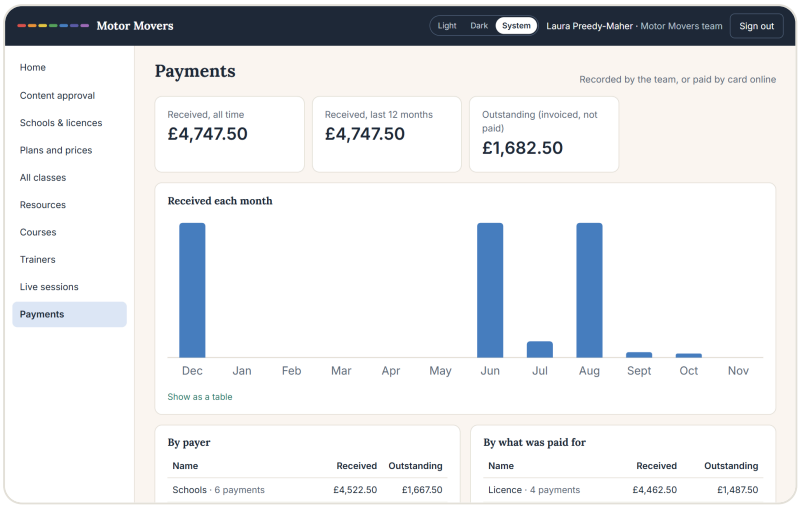

The training team, their Zoom logins and the switch to turn an account off.

7 Record payments and see income

Invoices are recorded by the team, created when a head approves a staff course place, and paid by card online or marked paid by hand. The Payments page shows money received, what is outstanding, a month-by-month chart, and totals by payer type, purpose, trust or group, school and person.

Why it matters: A live view of income and money owed, broken down the way the business needs it.

Payments: received, outstanding and income month by month.
